Note:

*Access to basic drinking water services is measured as the use of drinking water from improved water sources, located on premises, available when needed (no shortage within 24 hours), and meet the quality requirement of free of physical contamination (not cloudy, colored, or foamy). Therefore, it can be categorized as access to safely managed drinking water services from a physical aspect. Data are available from Susenas since 2018.

GOAL 5 GENDER EQUALITY

Indicator 5.1.1* The availability of legal frameworks to promote, enforce and monitor gender equality and non-discrimination on the basis of sex, 2020

BIDANG	PERCENTAGE VALUE OF THE AVAILABILITY OF LEGAL FRAMEWORK IN EACH FIELD
	2020
(1)	(2)
FIELD	
1. Overarching legal framework	100.00
2. Violence against women	91.67
3. Employment and economic sector	90.00
4. Marriage and family	81.82

Source: Ministry of Women Empowerment and Child Protection, 2021

Indicator 5.2.1* Proportion of women and girls (aged 15-64 years) subjected to physical, sexual or psychological violence by a current or former partner in the previous 12 months, 2016

DISAGGREGATION	YEAR
	2016
(1)	(2)
TYPE OF VIOLENCE	
Proportion of ever-married women (aged 15-64 years) subjected to physical violence by a partner in the previous 12 months	1.8
Proportion of ever-married women (aged 15-64 years) subjected to sexual violence by a partner in the previous 12 months	3.8
Proportion of ever-married women (aged 15-64 years) subjected to psychological violence by a partner in the previous 12 months	7.5
Proportion of ever-married women (aged 15-64 years) subjected to physical, sexual or psychological violence by a partner in the previous 12 months	10.4

Source: National Women's Life Experience Survey (SPHPN), BPS – Statistics Indonesia

Indicator 5.2.2* Proportion of women and girls (aged 15-64 years) subjected to sexual violence by persons other than partner in the previous 12 months, 2016

DISAGGREGATION	YEAR
	2016
(1)	(2)
MARRIAGE STATUS	
Never married/never had a partner	19.04
Ever/currently have a partner	2.16
Indonesia	4.66

Note:

In the report from Ministry of Law and Human Rights:

- 1) Has been followed up: The complaints are followed up with a review process to determine whether the complaint is filed or to be followed up with a recommendation letter. In addition, this includes a letter which is followed up by a letter of recommendation.
- 2) Not yet / Not Followed Up: The complaints that have not been followed up yet are complaints that have not been handled in the current year. The complaints that were not been followed up were related to problems for which there were no suspicions of human rights violations or had entered the realm of the judiciary.

In the report from Komnas HAM, there was a change in the calculation unit, as part of Komnas HAM's effort to improve the accuracy of in presenting the complaint data.

* Documents refer to the number of documents submitted by the complainant and the complained party for the complaint (case) concerned.

** Complaints refers to the case submitted by the complainant. So that it is possible that in one complaint, there are more than one documents.

This indicator is also reported as Indicator 16.10.1.(b)

Note:

In the report from Ministry of Law and Human Rights:

- 1) Has been followed up: The complaints are followed up with a review process to determine whether the complaint is filed or to be followed up with a recommendation letter. In addition, this includes a letter which is followed up by a letter of recommendation.
- 2) Not yet / Not Followed Up: The complaints that have not been followed up yet are complaints that have not been handled in the current year. The complaints that were not been followed up were related to problems for which there were no suspicions of human rights violations or had entered the realm of the judiciary.

In the report from Komnas HAM, there was a change in the calculation unit, as part of Komnas HAM's effort to improve the accuracy of in presenting the complaint data.

* Documents refer to the number of documents submitted by the complainant and the complained party for the complaint (case) concerned.

** Complaints refers to the case submitted by the complainant. So that it is possible that in one complaint, there are more than one documents.

DATA PROCESSING SYNTAX

A. Calculation of the Food Insecurity Experience Scale (FIES)

Moderate and Severe Prevalence of Food Insecurity Based on the Food Insecurity Experience Scale

FAO's Voices of the Hungry (VoH) has developed a new global standard for estimating the prevalence of food insecurity using a tool called the Food Insecurity Experience Scale (FIES). FIES is a food insecurity severity experience matrix that relies on respondents' immediate responses to questions about their access to adequate food to assess their ability to access/obtain food. Sample units collected in FIES: households or individuals.

The FIES Survey Module (FIES-SM) consists of 8 questions about access to food. Questions about FIES-SM focused on their own behavior and experiences related to increasing difficulty in accessing food due to limited resources.

FIES calculation steps:

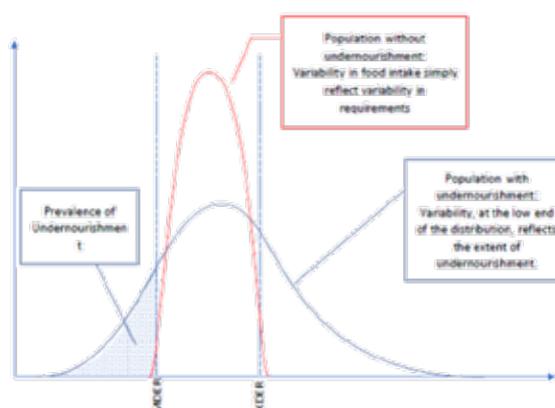

1. Setting up the FIES data set and weighting
2. Doing modelling with Rasch model, using package R: RM.weights
3. Checking the Rasch model output (validation)
 - Infit statistics (between 0.7 and 1.3)
 - Residual correlation (no correlation between residuals) seen from the scree plot
 - Rasch reliability (>0.7)
4. Comparing with global standards
5. Calibrate with global standards
6. Determine the questions used for calculating moderate and severe food insecurity
 - Determine tolerance limits with a minimum requirement of 5 questions that must be used to calculate food insecurity. The commonly used tolerance limit is 0.35
 - Perform adjusted FIES against global standards
 - Check the mean and standard deviation
7. Calculating moderate and severe food insecurity

B. Calculation of Prevalence of Undernourishment (PoU)

According to the FAO, undernourishment is:

“Condition of people who consume, on regular basis, amounts of food that do not provide the dietary energy need to be healthy and active”

Figure 1. Illustration of PoU

Ideally, the PoU calculation is based on observing food consumption, calculating the energy produced from the food consumed, and comparing it with energy requirements to group individuals into a representative sample. However, in practice, there are two problems that make this direct approach difficult. First, the records carried out should assess energy consumption habits, this is to describe the normal condition of the individual. Repeated observations are needed to control for short-term variations that have no implications on nutritional adequacy. Second, individual energy needs are not actually observable. We may be able to predict an individual's energy requirements for a given age, gender, height, and activity, but we can never be sure whether the individual with the recorded food consumption is indeed an individual describing the general condition. Therefore, a model-based approach is needed to overcome this problem.

Supporting data used to calculate the PoU include:

1. Population data by age and sex.
2. Data on calorie consumption, is approached by using data on calorie consumption per capita from the National Socio-Economic Survey (Susenas).
3. Income data, approached using Expenditure data obtained from the (Susenas) results
4. Height and weight data, approached using median height and weight data by age and sex from National Institute of Health Research and Development (NIHRD)

The procedure for calculating PoU using (Susenas) data is:

1. Create a population pyramid by age group and gender.
2. Calculating daily per capita calorie consumption
3. Calculating the coefficient of variation from the daily per capita calorie consumption data.
4. Calculating the Minimum Dietary Energy Requirement (MDER) and its coefficient of variation (CV). MDER is calculated by calculating the minimum calorie requirement needed by a person according to their age and gender
5. Calculate the total coefficient of variation (CV). The total coefficient of variation is calculated by adding up the coefficient of variation and its constituent variables
6. Calculating PoU, by comparing the consumption of calories per capita with the MDER. The PoU value is the number of people whose calorie consumption is below the MDER.

The MDER calculation procedure is:

1. Determine the composition of the population by age group and gender based on (Susenas) data
2. Calculate the minimum energy requirements for each age group and gender based on the average height and weight in the appropriate age group and gender
3. Calculate the MDER based on the results of Step 2 and add it to the calorie needs for pregnant women, which is 210 Kcal multiplied by the Birth Rate.

C. Indicator Methodology 2.c.1* Food Price Anomaly Indicator (Indicator of Food Price Anomalies)

I. Data sources

a. Price data

- Prices for each city are obtained from the publication of BPS weekly prices which are then averaged to form monthly prices. This price is the price of the selected quality that is most consumed in the city in question.
- The national rice price is calculated from the weighted average of rice prices in all cities covered by the CPI each week. Monthly data is obtained from the average weekly price.

b. CPI data

The CPI data used is the general CPI for the base year 2018=100 which has been released by BPS every month for each city.

II. The formula and steps for calculating the Food Price Anomaly Indicator

a. Calculating real price

$$real\ price_t = \frac{Price_t}{CPI\ (2018 = 100)\ general_t}$$

b. Calculating quarterly and annual compound growth rates

$$CGR_t = \left(\frac{P_{t_B}}{P_{t_A}} \right)^{\frac{1}{n}} - 1$$

P_{t_A} = price at the beginning of the period

P_{t_B} = price at the end of the period

n = time between periods A and B (in months)

The above CGR formula is used to calculate compound growth rates both quarterly (CQGR) and annual (CAGR)

c. Calculating weighted average

$$\overline{W_CXGR}_t = \frac{1}{\sum_{y=1}^Y w_y} \sum_{y=1}^Y w_y CXGR_{yt}$$

$\overline{W_CXGR}_t$ = weighted average Compound Growth Rate (CGR) in month t of X (X, quarterly or annual period for CGR)

w_y = y-year weigher

$CXGR_{yt}$ = compound growth rate in year y month t

$\sum_{y=1}^Y$ = addition operator during year Y

d. Calculating the weighted standard deviation

$$\hat{\sigma}_{W_CXGR}_t = \sqrt{\frac{\sum_{y=1}^Y w_y (CXGR_{yt} - \overline{W_CXGR}_t)^2}{\sum_{y=1}^Y w_y (\hat{Y} - 1)/\hat{Y}}}$$

$\hat{\sigma}_{W_CXGR}_t$ = weighted standard deviation of Compound Growth Rate (CGR) at month t of X (X, quarterly or annual period for CGR)

\hat{Y} = total number of weighers

e. Calculating the value of the quarterly and annual Food Price Anomaly Indicator

$$(XIFPA_{yt}^z) = \left(\frac{CXGR_{yt} - \overline{W_CXGR}_t}{\hat{\sigma}_{W_CXGR}_t} \right)$$

f. Establishing Food Price Anomaly Indicators

$$IFPA_t = \alpha \left(\frac{CQGR_{yt} - \overline{CQGR}_t}{\hat{\sigma}_{CQGR}_t} \right) + (1 - \alpha) \left(\frac{CAGR_{yt} - \overline{CAGR}_t}{\hat{\sigma}_{CAGR}_t} \right)$$

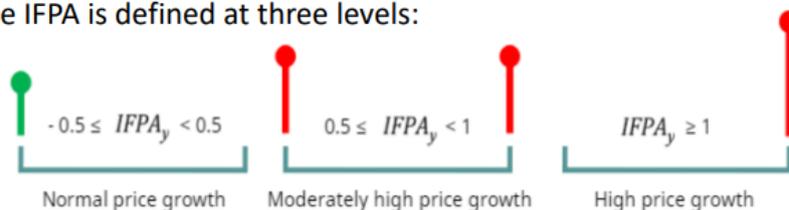

$$IFPA_t = 0.4 \left(\frac{CQGR_{yt} - \overline{CQGR}_t}{\hat{\sigma}_{CQGR}_t} \right) + 0.6 \left(\frac{CAGR_{yt} - \overline{CAGR}_t}{\hat{\sigma}_{CAGR}_t} \right)$$

III. Result interpretation

FAO (Food and Agriculture Organization of the United Nations) groups the Food Price Anomaly Indicators (IFPA) into five levels, including:

- Normal price growth: $-0.5 \leq IFPA_y < 0.5$
- Moderately high price growth: $0.5 \leq IFPA_y < 1$
- High price growth: $IFPA_y \geq 1$
- Alert low price: $IFPA_y \leq -1$
- Warning low price: $-1 < IFPA_y < -0.5$

The IFPA is defined at three levels:

Based on the results of Felix G. Baquedano's research entitled "Developing an indicator of price anomalies as an early warning tool: A compound growth approach" in 2015, the Food Price Anomaly Indicators are classified into three levels, including:

- a. Price watch: $0.5 \leq X_IPA_t^Z < 1$
- b. Price alert: $X_IPA_t^Z \geq 1$
- c. Normal: o. w.

$$\left(\frac{CXGR_{yt} - \overline{CXGR_t}}{\hat{\sigma}_{CXGR_t}} \right) = X_IPA_t^Z \begin{cases} 0.5 \leq X_IPA_t^Z < 1 & \text{Price Watch}(X_IPA_t^W) \\ X_IPA_t^Z \geq 1 & \text{Price Alert}(X_IPA_t^A) \\ o. w. & \text{Normal}(X_IPA_t^N) \end{cases}$$

D. Agricultural Sector TPB/SDGs Indicators

SDG Indicator 2.3.1; 2.3.2; 2.4.1; and 5.a.1

Information taken from the publication: Sustainable Development Goals Indicators for the Agricultural Sector 2020 in the Provinces of West Java, East Java, and West Nusa Tenggara (Results of the Integrated Agricultural Survey).

Small-scale food producers (farmers) are producers that are structurally independent of fixed wage labor and who manage their production activities primarily with family workers. Most of the working time is spent on agricultural activities on their own farms or in their own homes. This agricultural income is a major part of their total income. Small-scale farmers are believed to be able to contribute significantly to the world's food. On the other hand, they are also estimated to be the poorest and food insecure. However, it is widely recognized that small-scale farmers are one of the main food-producing workers, and because they are in a relatively vulnerable position, it is important to promote development policies in their favor. Why is it important to focus on Small-Scale Farmers?

1. Food and nutrition security: A person is considered food safe if he always has adequate availability and access to sufficient, safe, and nutritious food to maintain a healthy and active life
2. Sustainable rural life: Life can be defined as capabilities, assets, and activities, which consist of human capital, social capital, natural capital, physical capital, and financial capital. Within the scope of indicators 2.3.1. and 2.3.2, the focus is on the sustainability and resilience of livelihoods located in rural areas.

3. Global food production: As smaller production units are better distributed in a given region and provide a more diverse range of food, the stability of small-scale farmers directly contributes to global food production and increases local and healthy food supplies

Several scientific literature and policy documents categorize the determination of Small-scale Farmers on four criteria: area of land managed, number of workers employed for agricultural production (mainly family members), market orientation and economic size of the business unit. In the 2020 (citation), Integrated Agricultural Survey, the criteria used to determine Small-Scale Farmers are summarized into 2 criteria, namely the physical size and the economic size of the agricultural business.

1. Physical size of agricultural business

- a. Managed land area

Including:

- Fallow land (not planted for a certain time)
- Land managed for seasonal/annual crops
- Land for rent

Not included:

- Forest land
- Abandoned land
- Land for rent

- b. Number of livestock kept

Farm size is measured in Tropical Livestock Units (TLU). TLU is a unit of livestock comparison used to compare the relative sizes of a herd. TLU is essentially an 'exchange ratio' between livestock species, obtained by converting body weight to metabolic weight.

2. The economic size of the agricultural business

The size of the economy is measured based on the total income of agricultural production. However, to get comparable results in different countries, income is expressed in Purchasing Power Parity (PPP) Dollars or Purchasing Power Parity (US\$ currency value).

From the 2 criteria used, a threshold for the lowest 40% distribution or 2 (two) distribution quintiles is determined based on the recommendations of experts and is also used by the World Bank for measuring welfare. This threshold is used specifically to monitor indicators 2.3.1 and indicator 2.3.2.

Indicator 2.3.1

Production volume per worker by class of plant farming/ husbandry/ fishery/ forestry.

Indicator 2.3.1 is used to measure how much volume can be produced per unit of labour i.e. average labour productivity.

$$SDG\ 2.3.1 = \frac{Output}{Labor\ Input} = \frac{Income}{Working\ Days\ of\ the\ Year}$$

Indicator 2.3.2

Average income of small-scale agricultural producers, by subsector.

Indicator 2.3.2 refers to the actual net income earned by small-scale food producers (farmers) from their agricultural activities. In other words, this indicator is used to measure the average income of small-scale farmers.

$$SDG\ 2.3.2 = Revenue - Cost + Stock\ Variation\ (if\ available)$$

Indicator 2.4.1

Proportion of productive and sustainable agricultural area

Indicator 2.4.1 is designed to measure the extent to which more productive and sustainable food production systems are implemented. This indicator also provides strategic information for policy makers in agriculture.

$$SDG\ 2.4.1 = \frac{(Agricultural\ land\ whose\ management\ is\ below\ the\ limit\ of\ productive\ criteria\ and\ sustainable\ agriculture)}{Agricultural\ Land\ Area}$$

Indicator 2.4.1 reflects various dimensions of sustainability: economic, environmental, and social with **11 (eleven) themes** and **11 (eleven) sub-indicators**

Dimension	Theme	Sub Indicator
Economy	1. Land Productivity	Production value per hectare
	2. Profitability	Farmer's net income
	3. Durability	Risk mitigation mechanism
Environment	4. Soil fertility	Soil degradation prevalence
	5. Water usage	Condition of water availability
	6. The risk of using fertilizer	Fertilizer use management
	7. The risk of using pesticides	Pesticide use management
	8. Biodiversity	Usage support practice agro-based biodiversity
Social	9. Decent work	Wage in agriculture
	10. Food safety	Food Insecurity Experience Index (FIES)
	11. Land ownership	Land ownership rights

Using sustainability criteria and thresholds, the results for each sub-indicator are presented in 3 (three) spectra:

	Desirable (green)	Acceptable (yellow)	Unsustainable (red)
SUB INDICATOR 1: Production value per hectare	Agricultural productivity is 2/3 of the 90th percentile of the distribution of production value data per hectare.	Agricultural productivity is 1/3 and < 2/3 of the 90th percentile of the distribution of production value data per hectare	Agricultural productivity is < 1/3 of the 90th percentile of the distribution of production value data per hectare
SUB INDICATOR 2: Farmer's Net Income	There is a profit earned every year for the past three years	There are profits earned in at least one year for the past three years	There has never been any profit at all in the last 3 years
SUB INDICATOR 3: Risk Mitigation Mechanism	Having or available access to at least 2 of the 3 risk mitigation mechanisms	Having or available access to at least 1 of 3 risk mitigation mechanisms	Does not have or is not available any of the 3 risk mitigation mechanisms
SUB INDICATOR 4: Soil Degradation Prevalence	The area of land affected by one of the four selected threats to soil fertility is less than 10 percent of the total agricultural land area	The area of land affected by one of the four selected threats to soil fertility is between 10 and d. 50 percent of total agricultural land	The area of land affected by one of the four selected threats to soil fertility is more than 50 percent of the total agricultural land area
SUB INDICATOR 5: Water Availability Conditions	Water availability has remained stable over the years for farms that irrigate more than 10% of the farm area. Default yield for farms that irrigate less than 10% of their farm area	Availability of water to irrigate at least 10% of agricultural area, but farmers do not know if water availability has remained stable over the years, or has experienced a reduction in water availability but there are organizations that effectively allocate water among users	Water availability is less than 10% of their agricultural area
SUB INDICATOR 6: Fertilizer Use Management	Farmers use fertilizers but there are at least 4 specific measures to mitigate the risk of using fertilizers to be considered. This includes farmers who do not use fertilizers	Farmers use fertilizers but there are at least 2 specific measures to mitigate the risk of using fertilizer to be considered	Farmers use fertilizers but no specific measure of risk mitigation of fertilizer use is considered
SUB-INDICATOR 7: Usage Management Pesticide	Farmers only use pesticides with low risk (WHO Class II or III). In this case, the farmer adheres to all three measures related to health and at least four of the seven measures related to the environment. This includes farmers who do not use pesticides	Farmers use only pesticides with low risk (WHO Class II or III) and adhere to at least two steps each of the measures related to health and the environment	Farmers use hazardous or very hazardous pesticides (WHO Class Ia or Ib), illegal pesticides, or use sufficient or slightly harmful pesticides without taking specific measures to reduce the environmental or health risks associated with its use (less than two from each category)
SUB INDICATOR 8: Agro-based biodiversity use support practices	(organic) Farmers apply at least three of the defined organic farming sustainability criteria (Non-Organic) Farmers apply at least two of the defined organic farming sustainability criteria	(organic) Farmers apply at least one of the defined organic farming sustainability criteria (Non-Organic) Farmers apply at least one of the defined organic farming sustainability criteria	(organic) Farmers do not apply any of the defined organic farming sustainability criteria (Non-Organic) Farmers do not apply any of the defined organic farming sustainability criteria

	Desirable (green)	Acceptable (yellow)	Unsustainable (red)
SUB INDICATOR 9: Wage in agriculture	If the average wage paid to unskilled workers (casual workers) is more than the national minimum wage or the minimum wage for agricultural sector workers (if available). This includes business units that do not use paid labor	If the average wage paid to unskilled workers (casual workers) is the same as the national minimum wage or the minimum wage for agricultural sector workers (if available)	If the average wage paid to unskilled workers (casual workers) is less than the national minimum wage or the minimum wage for agricultural sector workers (if available)
SUB INDICATOR 10: Food Insecurity Experience Index (FILES)	Mild food insecurity: if the probability of a farmer household being moderate to severe food insecurity is less than 0.5 and the probability of severe food insecurity is less than 0.5	Moderate food insecurity: if the probability of a farmer household being moderate to severe food insecurity is greater than 0.5 and the probability of severe food insecurity is less than 0.5	Severe food insecurity: if the probability of a farm household being severely food insecure is greater than 0.5
SUB INDICATOR 11: Land ownership rights	Have official land ownership documents with the farmer's name recorded in the ownership document, or the farmer has the right to sell and inherit	Have an official document even though it is not the name of the farmer recorded in the land ownership document	Do not have land ownership documents and do not have the right to sell and inherit

Indicator 5.a.1 (1)

Proportion of agricultural population who have rights to agricultural land; (2) Proportion of female agricultural residents as owners or who have rights to agricultural land, by type of ownership.

Indicator 5.a.1 generally aims to measure the prevalence of ownership or rights to agricultural land in agricultural households. Calculated through the concept of “Guaranteed rights to agricultural land”. In this case, the guaranteed rights are measured using three proxy variables, namely: ownership of legal documents, the right to sell agricultural land, and the right to inherit agricultural land. If one of the three criteria have been met, then the owner or manager is categorized as having secure rights to the land. Indicator 5.a.1 is divided into three indicators, namely 5.a.1.(a) female, 5.a.1.(a) male and 5.a.1 (b). The preparation of indicators refers to the following formula:

$$SDG\ 5.a.1.a(p) = \frac{\text{(Total female population with secure rights to agricultural land)}}{\text{Total female population in the agricultural sector}}$$

$$SDG\ 5.a.1.a(l) = \frac{\text{The total male population who has secure rights to agricultural land}}{\text{Total male population in the agricultural sector}}$$

$$SDG\ 5.a.1.(b) = \frac{\text{(Total female population with secure rights to agricultural land)}}{\text{Total population with secure rights to agricultural land}}$$

4

GOOD PRACTICES INDONESIA'S VNR 2021

Table of Good Practices Listed as Annex to VNR 2021

No	Name of Good Practice Activity	Name of Institution/ Implementing Organization
GOAL 1 NO POVERTY		
1	Entrepreneurial Assistance and Community-Owned Enterprise (BUMMas)	Rumah Zakat
2	Improving the Welfare of the Dayak Community through Kelulut Honey Bees	Asia Pulp and Paper (APP) Sinar Mas
3	Economic Empowerment through Development of SME for Women Around the Operation Area	Kangean Energy Indonesia Ltd.
4	COVID-19 Response by Filantropi	Filantropi Indonesia
5	Cash-based Assistance in Lombok 2018–2020: From Earthquake to COVID-19	UNICEF Indonesia

No	Name of Good Practice Activity	Name of Institution/ Implementing Organization
----	--------------------------------	---

GOAL 2

ZERO HUNGER

1	Food Provision during the COVID-19 Pandemic from Domestic Production	Ministry of Agriculture
2	Assistance for Vegetable Farmers in the midst of the COVID-19 Pandemic	Ministry of Agriculture
3	Community-Based Food Safety Improvement	Food and Drug Authority
4	Rumoh Gizi Gampong (RGG) in East Aceh District, Aceh Province	Government of East Aceh District
5	OMABA Cooking Center: A Bottom-Up Solution to Eliminate Stunting	Government of Bandung City
6	Bandung Tanginas	PKK of Bandung City, West Java
7	Stunting Free Village	Rumah Zakat

No	Name of Good Practice Activity	Name of Institution/ Implementing Organization
----	--------------------------------	---

GOAL 3

GOOD HEALTH AND WELL-BEING

1	5NG Program (JateNG GayeNG NginceNG WoNG MeteNG)	Government of Central Java Province
2	Youth innovations in the field of HIV digital information technology	UNAIDS
3	Unlearning Ableism Human Rights Day 2020	SCORP-CIMSA
4	Muhammadiyah COVID-19 Command Center (MCCC): Muhammadiyah's Contribution in Handling Covid-19	Muhammadiyah

No	Name of Good Practice Activity	Name of Institution/ Implementing Organization
----	--------------------------------	---

GOAL 3

GOOD HEALTH AND WELL-BEING

5	Community Tuberculosis Care Support for people affected with Tuberculosis through a pilot Mental Health and Psychosocial Support program	Aisyiyah
6	Tuberculosis cadre stories	Aisyiyah

No	Name of Good Practice Activity	Name of Institution/ Implementing Organization
----	--------------------------------	---

GOAL 8

DECENT WORK AND ECONOMIC GROWTH

1	Mamuju MSMEs become Independent and Successful After the Earthquake	Indonesian Institute of Small and Medium Enterprises Strategic Study (LKS UKMI)
2	Local Innovation, Love Your Local Products: Endek Goes International	Chairman of the Bali Province PKK Steering Team, Industry and Trade Office, Regional National Craft Council
3	COVID Response by Sampoerna	PT HM Sampoerna Tbk
4	Inclusive Sustainable Economic Development (ISED)	Ministry of National Development Planning/Head of National Development Planning Agency and GIZ

No	Name of Good Practice Activity	Name of Institution/ Implementing Organization
----	--------------------------------	---

GOAL 10

REDUCED INEQUALITIES

1	Mentor Facility to Investigate and Prosecute TIP Crimes in Indonesia	International Organization for Migration (IOM)
2	Advancing Measures to Prosecute TIP (AMPUH)	International Organization for Migration (IOM)

No	Name of Good Practice Activity	Name of Institution/ Implementing Organization
----	--------------------------------	---

GOAL 12

RESPONSIBLE CONSUMPTION AND PRODUCTION

1	Community-Based Independent Trash Management	PT. Pindo Deli Pulp and Paper Mills – Karawang (APP Sinar Mas)
2	Overcoming Waste Problems through Community-Based Waste Banks	PT. Eka Mas Fortuna (APP Sinar Mas)
3	Sustainable Palm Oil Project in West Kalimantan	BASF and HENKEL
4	Bumi Maluku Lestari Waste Bank	PT Pertamina (Persero) DPPU Pattimura
5	Indonesia Circular Economy Forum	Greeneration Foundation
6	Buntah – Soap from Used Cooking Oil	Gajalahkebersihan, Buntah.id, KKN of Lampung University in Gumukmas Village

No	Name of Good Practice Activity	Name of Institution/ Implementing Organization
----	--------------------------------	---

GOAL 13
 CLIMATE ACTION

1	Empowerment Grow Green	Jejak Rimba Raya
2	Building Disaster Risk Reduction for City and Community Resilience	Yayasan Pusat Kajian dan Perlindungan Anak (PKPA)
3	Utilization of Biogas for Household Energy Supply	Sesami
4	Improving the Food and Economic Security of Vulnerable Communities through Sustainable Agriculture	FIELD Foundation

No	Name of Good Practice Activity	Name of Institution/ Implementing Organization
----	--------------------------------	---

GOAL 16
 PEACE, JUSTICE AND STRONG INSTITUTIONS

1	Collaboration for the Issuance of Birth Certificates for All	UNICEF Indonesia
2	People Living with HIV in Indonesia are Free from Stigma and Discrimination Thanks to a Supportive Response and Environment	UNAIDS
3	Progressive and Leading Young Women	Plan International Indonesia
4	Creating a Safe and Child Friendly School: Anti-Bullying Program in Schools	Setara Foundation, Indonesia Melayani Foundation (YIM), and the Provincial Governments of South Sulawesi and Central Java, supported by UNICEF Indonesia
5	Mitigating the Impact of a Pandemic on Prisoners and Detainees for Children and Adults	Ministry of Law and Human Rights of Republic of Indonesia

No	Name of Good Practice Activity	Name of Institution/ Implementing Organization
----	--------------------------------	---

GOAL 17

PARTNERSHIPS FOR THE GOALS

1	Optimizing Local Resources	Penabulu Foundation
2	Sambirata, Empowered Spice Village	PT Industri Jamu and Farmasi Sido Muncul Tbk.
3	“Temali” – Bringing Together and Uniting Volunteers	Indorelawan – Jakarta

GOAL 1 NO POVERTY

LIST OF GOOD PRACTICES FOR GOAL 1

1. Entrepreneurial Assistance and Community-Owned Enterprise (BUMMas)

By Rumah Zakat

Dealing with high poverty rate in Indonesia requires the involvement of all stakeholders. Statistics Indonesia (BPS) noted that as of September 2020 the poor population had increased to 27.55 million people. At the same time, the percentage of poor people as of September 2020 also rose to 10.19 percent. BPS also noted that the poverty rate in rural areas was much higher than that in urban areas. This unequal situation requires an alternative development approach that emphasizes the participation of the grassroots community as the subject of development.

Therefore, Rumah Zakat participates in poverty alleviation efforts through economic empowerment in rural area. Rumah Zakat's economic empowerment employs two approaches: first, individual-based economic empowerment (MSME) (Entrepreneurial Assistance); second, group-based empowerment with a social entrepreneurship approach (Community-Owned Enterprises/BUMMAS) to create new economic institutions that are directly managed by the community, whose benefits can be felt not only by the economic actors themselves, but also other people around them.

Rumah Zakat's economic empowerment employs two approaches, i.e. individual and group/institutional approach. The individual approach also refers to Entrepreneurial Assistance Program. Entrepreneurial Assistance is a local potential-based economic

empowerment program, targeting individual micro-entrepreneurs. Meanwhile, BUMMas is a program with a group/institutional approach, namely a group-based economic empowerment program and formal institutions (social enterprises).

Economic empowerment aims to strengthen the economy of rural communities, through the use of local potentials that not only generate profits, but also provide social benefits to the community. There are several stages of activities in the economic empowerment, such as the entrepreneurial assistance program provided with mentoring, entrepreneurship education, product strengthening, good manufacturing practices, legality advocacy, marketing as well as provision of business facilities and venture capital. Similar to entrepreneurial assistance, BUMMas also has several activities such as

group assistance, institutional strengthening, strengthening business models, strengthening markets and business development.

BUMMAS program provides business capital for group as collective assistance, while Entrepreneurial Assistance program provides venture capital for individual. Rumah Zakat divides BUMMAS into 3 types: (1) BUMMAS microfinance which is engaged in savings and loans, venture capital, and the Berdaya Mart business unit; (2) BUMMAS micro business which is engaged in labor-intensive business or product processing; and (3) BUMMAS agribusiness which is engaged in sustainable agriculture/livestock and trading business development. The parties involved in this program are Rumah Zakat's Inspiration

Volunteers as empowerment facilitators, as well as individual and group/institution beneficiaries that are established collectively. In 2020, Entrepreneurial Assistance program has assisted 2,809 beneficiaries with an average of IDR 1,626,608.00 for each beneficiary. In addition, Rumah Zakat currently has 196 BUMMAS with 2,900 members.

Based on the results of an analysis conducted by Rumah Zakat in 2020: (1) 15% of the beneficiaries of the Entrepreneurial Assistance program have been alleviated from poverty; and (2) BUMMAS managed to generate a turnover of IDR 9,681,785,811 and social funds of IDR 148,416,367 which were used to run social programs in the community where BUMMAS was established.

2. Improving the Welfare of the Dayak Community through Kelulut Honeybees

By Asia Pulp and Paper (APP) Sinar Mas

Desa Makmur Peduli Api (DMPA) is a program developed by APP Sinar Mas to support alternative livelihoods for local communities to reduce community dependence on forest land. The main objective is to empower village communities to actively participate in sustainable forest management through agroforestry, a non-burning agricultural practice that links community prosperity, forest sustainability, and reduction of forest fires. Bahta Hamlet, Bonti Sub-District, Sanggau District, West Kalimantan, which borders one of APP's wood supplier areas, i.e. PT Finnantara Intiga, which was known for producing honey in the area. However, the honey production in Bahta Hamlet is gradually decreasing due to the lack of knowledge of the farmers who only rely on hereditary practices. This threatens the continued cultivation of Kelulut honeybees in the Dayak people who rely heavily on natural resources for their livelihoods.

In 2018, the DMPA program supported Togos Naho, a 30-year-old man, resident of Bahta Hamlet, Bahta Village, Bonti Sub-District, Sanggau District, West Kalimantan in developing Kelulut honeybee cultivation. Togos has cultivated Kelulut bees (*Trigona itama*) since 2010 in Bahta which is known as a honey producer. With DMPA program's support, Togos seeks to develop sustainable and environmentally friendly cultivation. Currently, Togos is trying to introduce and share the details of his knowledge with the surrounding community on how to develop sustainable Kelulut honeybees. Togos needs to ensure that the local community comprehends and understands the basic knowledge that will improve the quality of the honey. For example, it is necessary to pay attention to the size of the beehive, as well as using gloves and vacuuming equipment at harvest. In addition, harvesting cannot be done at night and smoke should not be used. Apart from Togos, the beneficiaries of the DMPA program are the Dayak people in Bahta Hamlet. The Dayak community is a well-known traditional

community in Indonesia that preserves its cultural heritage and life. This program was held in close collaboration between APP Sinar Mas and PT Finnantara Intiga, as the supplier of APP wood located in the vicinity of the Dayak community. PT Finnantara facilitates the program and also engages local governments to increase the scope of its program so that it has a wider impact.

Togos has succeeded in developing Kelulut honeybee cultivation in a sustainable manner. Currently, Togos is completing its honey with Food Production Certificate (Home Industry Production Certificate or P-IRT) for broader marketing. Several fixes are required to obtain the certificate. The teams in the DMPA and Togos programs are working to integrate local wisdom and modern knowledge standards to improve their livelihoods.

3. Economic Empowerment through Development of SME for Women Around the Operation Area

By Kangean Energy Indonesia Ltd.

The length of time the fisherman sails leaving his wife and family causes vulnerability for the families who are left behind—especially for women. These people need additional income while they are left behind. In addition, fishermen often experience famine conditions during strong winds with minimal catches. Sometimes, the fish harvest can be so large to the point that fish price becomes really cheap and the fishermen suffer losses. In order to support the family's economy, these women took the initiative to carry out processing activities for local fishery products such as fish, seaweed and local agricultural products such as cassava and bananas into products of higher selling value.

The company's strategy is to improve the economy of the community around Sapeken Sub-district as a corporate social responsibility through programs that are in accordance with the needs of the community, especially women who have the skills to make processed products. Kangean Energy Indonesia Ltd also involves various parties for this program, including the village government, PKK, the industry office and also the Sumenep District government. The beneficiaries of this program are 435 women who are members of the KEI fostered groups for various products. A total of 6 groups have

also become representatives of One Village, One Product for its flagship products, namely seaweed lunthead, seaweed snacks, shredded fish, fish balls, shredded squid, and cassava chips.

This SME empowerment program is able to provide added value to fishery and agricultural products which produce high-value products with attractive packaging, namely seaweed lunthead, shredded fish, fish balls, cassava chips and banana chips. A total of 50 business groups in Sapeken Sub-district (453 women) participated in this program with an average profit of 1-3 million/month. In addition to increasing income, this program is also able to foster an entrepreneurial spirit and also increase the self-confidence of these women. The assistance started with training on product processing followed by training in marketing, packaging, manufacturing, and obtaining a PIRT license. These assisted products have been marketed at local markets, districts, provinces to all of Indonesia and have entered exhibitions such as the Jatim Fair.

4. COVID-19 Response by Filantropi

By Filantropi Indonesia

This program is an initiative of Filantropi Indonesia for various philanthropic responses to help the government and people affected by COVID-19. COVID-19 Response by Filantropi is conducted in the form of a website that can be accessed at covid19filantropi.id. It not only contains data and developments from various philanthropic initiatives but also the number of donations that have been collected. This website also provides a space for institutions to publish reports on the use of donated funds.

All information contained on the website is collected from online searches. Therefore, this website cannot be declared to represent all philanthropic activities for COVID-19 carried out in Indonesia. Besides searching for information independently, the team also

received information/data from members and other institutions. The website does not limit its benefits to philanthropic institutions only. Other sectors such as the private sector, government, community, academics, etc. can report their philanthropic activities through this media.

This website has been useful for various parties, especially members of Filantropi Indonesia. Many of them use this platform as a medium to provide information on their philanthropic activities for COVID-19. In addition, this website also helps to publish accountability reports for use and donations. This is considered to increase the accountability and transparency of philanthropic institutions. Meanwhile, for the community, the website can be a medium for collecting information on ongoing COVID-19 assistance.

5. Cash-based Assistance in Lombok 2018–2020: From Earthquake to COVID-19

By UNICEF

In response to the 2018 earthquake and the COVID-19 pandemic since 2020, UNICEF has successfully implemented the Emergency Cash Based Assistance (CBA) program for children affected by disasters in North and East Lombok. It aims to meet the basic needs of affected families with children up to six or seven years of age, pregnant women and breastfeeding women. At a later stage of recovery, cash assistance is intended to support economic revival and increase the capacity of stakeholders to sustain cash-based assistance in the context of disaster response.

CBA 1 is targeting 4,200 beneficiaries in six villages in North Lombok. Payment is made in four stages, totaling IDR 4.45 million (USD 304) per household. CBA 2 represents an expansion to East Lombok District, targeting 4,500 beneficiaries in eight villages in four sub-districts. UNICEF, with support from Catholic Relief Services and the Indonesian Post Office, distributed IDR 4 million (USD 274) to each beneficiary in three stages at village distribution points.

Unlike CBA 1 which focuses primarily on cash disbursement, CBA 2 is carried out as part of UNICEF's policy advocacy by strengthening the capacity of local governments, advocating for standard operating procedures and cash transfer guidelines, as well as developing safety precautions during the COVID-19 pandemic. During CBA 1 and CBA 2, UNICEF conducted studies on relevant topics such as: 1) Qualitative study on emergency multipurpose cash transfers in East Lombok, and 2) Remote COVID-19 insight study.

The results of this program include:

1. More than 8,800 households received cash transfers at CBA 1 and CBA
2. Most of the assistance was used to pay for essential items (e.g. food, WASH products, school supplies), while 32% was used to access basic services (e.g. transportation to schools/hospitals, enrollment to early childhood education (PAUD), medical fees)
3. A complaint handling mechanism was established, including through a hotline and U-report
4. Training and workshops were held for partner organizations, including with local governments

GOAL 2 ZERO HUNGER

LIST OF GOOD PRACTICES FOR GOAL 2

1. Food Provision during the COVID-19 Pandemic from Domestic Production

By Ministry of Agriculture

To overcome the possibility of a national food crisis as a result of the COVID-19 pandemic, at the direction of the President of the Republic of Indonesia Joko Widodo, the Minister of Agriculture Syahrul Yasin Limpo has refocused agricultural development policies and programs, one of which is by launching the Food Availability Improvement Program in the New Normal Era. This program consists of four actions (CB), namely:

- CB1 : Increasing production capacity, which consists of accelerating rice planting; development of new food agriculture land in Central Kalimantan covering an area of 30.00 hectares; expansion of new planting areas for rice, corn, soybeans; and increasing high-growth food production to reduce dependence on imports.
- CB2 : Diversifying local food, which consists of diversifying carbohydrate-based local according to local wisdom that are focused on one main commodity for each province (cassava, corn, sago, banana, potato, and sorghum); as well as utilization of home yards to increase food availability and nutrition, by empowering 4,300 Women Groups through Sustainable Home Yard (P2L) activities.
- CB3 : Strengthening food reserves and logistics systems, which consists of strengthening rice reserves of the central government and district/city governments; development of village-based community food granaries in 33 provinces; development of a national food logistics system to stabilize food supply and prices through 1,548 Community Food Business Development (PUPM) and 3,796 Indonesian Tokok Tani (TTI) in all provinces; and alleviation of food insecure areas in all provinces.
- CB4 : Development of modern agriculture, which consists of developing smart farming, developing and utilizing screen houses, developing food estates, and developing farmer corporations.

This program aims to increase the availability and domestic production of rice, carbohydrate-based food other than rice, as well as various foods around the community. It also aims to establish additional food reserves throughout districts/cities to villages and develop modern agriculture that is efficient and competitive, as well as increasing the productivity of food agriculture businesses.

2. Assistance for Vegetable Farmers in the midst of the COVID-19 Pandemic

By Ministry of Agriculture

Four months after the COVID-19 pandemic entered Indonesia and with the imposition of large-scale social restrictions (PSBB), vegetable horticultural farmers in various regions experienced marketing difficulties and prices fell. This is confirmed by the results of a rapid assessment of the Center for Socio-Economic and Agricultural Policy (PSEKP) of the Ministry of Agriculture in four vegetable production centers in Cianjur District, West Java; Magelang District, Central Java; Banyuwangi District, East Java; and Minahasa District, North Sulawesi.

Vegetable farmers experienced severe shocks in the form of major obstacles in marketing their perishable products. Regular customers such as hotels, restaurants and caterers cut off contact because their business activities declined sharply. Likewise, the volume of marketing to supermarkets and traditional markets has decreased sharply, only around 10%. Due to the large excess supply coupled by the perishable nature of vegetables, the price drops sharply. For example, in Pacet Subdistrict, Cianjur, tomatoes, which were usually sold at a contract price of IDR 31,500/kg, had to be sold very cheaply at IDR 3,000/kg. In Kaliangkrik Subdistrict, Magelang, the price of green onions was only IDR 2,500/kg to the normal 10,000/kg. In Tomposo District, North Sulawesi, curly red chilies were only valued at IDR 4,000-5,000 per kg, whereas before the pandemic it was still around IDR 15,000/kg. Most of the agricultural products from Banyuwangi District were sent to Bali and Surabaya before the pandemic, but it cannot be done anymore because of restrictions on transportation movements.

Vegetable farmers in Pacet District, Cianjur overcome the problem of marketing by optimizing online sales. The Jaya Giri Multi Tani Farmers Association (Gapoktan MUJAGI) marketed their vegetables through direct selling to residential and office consumers. In mid-May 2020, this Farmer Group has explored online sales through kedaisayur.com, [Bukalapak](http://bukalapak.com), and [Tokopedia](http://tokopedia.com).

Gapoktan MUJAGI's efforts to market their products online have paid off. Several agencies in Bogor City (about 1 hour drive from Cianjur) have responded to help overcome the difficulties of the vegetable farmers in Pacet Cianjur sub-district, one of which is PSEKP. The head of PSEKP, Sudi Mardianto, said that the purchase was carried out as a form of concern for farmers affected by the COVID-19 pandemic. The purchase price was agreed to be above the production price, so that farmers still profit, he said. A total of 300 packages of vegetables at a price of IDR 40 thousand per package were ordered by the office staff who were coordinated by their leaders. The vegetable package consists of various chilies, cabbage, eggplant, carrots, leeks and tomatoes. Of the 300 packages ordered, with the spirit of sharing in times of trouble, 150 packages were collected to be distributed to cleaners, security guards, and households around the office complex.

According to the Chairman of Gapoktan MUJAGI, Suhendar's purchases using this pattern greatly helped the farmer's economy during difficult conditions and situations due to the pandemic. However, this difficult situation does not discourage Gapoktan MUJAGI from producing. In fact, this Gapoktan, which has seven farmer groups, continues to plant vegetables on the harvested land. According to Suhendar, this step is a solution to survive during a pandemic, coupled with efforts to expand marketing through online sales.

3. Community-Based Food Safety Improvement

By Food and Drug Authority

Ensuring safe food is part of the effort to provide quality food that is nutritious, safe and healthy. In accordance with the mandate of Law No. 18/2012 concerning Food, food supply for the fulfillment of food community consumption is carried out by involving the participation of all stakeholders, including the community, starting from planning, implementation and supervision. The Food and Drug Authority (BPOM) initiated a Community-Based Food Safety Program, which is an intervention program that engages the community to play an active role in fulfilling food safety. This intervention is comprised of three programs, namely: (1) safe food village program; (2) safe snack program for school-age children; and (3) community-based safe market program. This program has been running since 2014 in villages/urban villages/schools/markets in 34 provinces.

Intervention is carried out on the supply side, namely through the development of Micro, Small and Medium Enterprises (MSMEs) in the food sector in villages/urban villages in the food sector and the demand side, namely through empowerment activities for cadres and rural communities and school communities. Through this program, from 2012 to 2020, interventions or empowerment have been carried out regarding food security in 5,214 villages/urban villages and 301 markets in 34 provinces; and capacity building has been carried out to more than 15 thousand cadres and more than 105 thousand communities. The gap assessment study before and after the intervention has found an increase in food safety knowledge in the group of housewives, PKK women, teachers, youth organizations, and school students (see the infographic below).

Picture A1.
Achievement of Community-Based Food Safety Programs.

In the future, this program needs to strengthen coordination and cooperation with various stakeholders, including the government, business actors and the community in order to increase awareness and implementation of food safety, given that food safety is everyone's business. The total number of villages that have been intervened through this program is around 6.2% of 83,880 villages/urban villages, 16% of schools and 1.9% of the market. This achievement is still very low, so it is necessary to increase the scope of activities and encourage local governments to replicate this program. In this regard, BPOM is carrying out program revitalization, namely by implementing an integrated food safety program through three integration strategies: program integration, regional integration and data integration.

4. Rumoh Gizi Gampong (RGG) in East Aceh District, Aceh Province

By Government of East Aceh District

District/city governments and community institutions recognize the importance of reducing the prevalence of stunting as an investment to build a future Indonesian people who are healthy, active, intelligent, and productive. One effort that is considered as an example of best practice is an initiative by the District of East Aceh, Aceh Province, which has a fairly high stunting rate. The Regional Government of East Aceh District is implementing a program to accelerate the reduction of the prevalence of stunting called Rumoh Gampong (RGG). The main activity of RGG is to increase institutional capacity and human resources through training on stunting.

In order to empower village communities and cadres in an effort to accelerate the prevention of stunting. The Regional Government of East Aceh District, Aceh Province designed the Rumah Gizi Gampong (RGG) program. This activity is carried out in an integrated and community-based manner at the gampong/village level.

RGG is a model for handling and preventing stunting in an integrated manner through a family and community empowerment approach at the village level with a specific and sensitive scope of activities with a main focus on 3 aspects, namely (a) nutrition services for risk groups (PMT-local, supplementation, and other forms of nutrition services); (b) education and capacity building of families and communities; and (c) strengthening family food security, family empowerment and PHBS, and other activities according to conditions and problems in the village.

The purpose of RGG in combating stunting is:

- a. Empowering families and communities in an effort to improve nutrition services independently by involving various related sectors.
- b. Increase the knowledge and skills and capacity of families and village communities in efforts to prevent and control stunting
- c. Empowering the community in an effort

to increase food security, economic empowerment, improve hygiene and healthy living habits in support of stunting reduction.

The main activities of RGG include sensitive and specific activities in the prevention of stunting, as follows:

- a. Nutrition service activities and increasing nutritional intake from family meals, namely: (i) routine education/counseling, (ii) family menu review (analysis of energy and nutrient availability), (iii) assistance in family menu preparation, (iv) monitoring of Local PMT consumption, (v) PKK and posyandu cadres supervised by Village Nutrition Assistants/TPGD, as well as (vi) distribution and supervision of supplementation (Vit A, Iron Tablets) and other interventions.
- b. Educational activities and capacity building, namely: (i) PMBA counseling for children and nutritional counseling for pregnant and breastfeeding women, (ii) PMBA module and balanced nutrition module for pregnant and breastfeeding women, (iii) parenting and stimulation of growth and development, development of simple tools for cadres, and (iv) Food Monitoring Cards (KMM) conducted by posyandu cadres, supervised by Village Nutrition Assistants/TPGD, with 1:3 or 1:5 ratio.

Gampong Activities.

5. OMABA Cooking Center: A Bottom-Up Solution To Eliminate Stunting

By Government of Bandung City

Meanwhile, the Regional Government of Bandung City, West Java Province implemented the OMABA Cooking Center Program: A Bottom-Up Solution To Eliminate Stunting. The main activity of this program is to produce healthy food for consumption of malnourished children, sent by motor transportation. This program has succeeded in increasing public awareness of the need to rapidly reduce the prevalence of stunting. The lesson from this program is that cooperation between stakeholders is one of the keys to the success of reducing stunting.

In an effort to eliminate stunting, the Government of Bandung City has initiated the OMABA Cooking Center Program in Cisaranten Kidul Village, Bandung City since 1 January 2013. This program is an initiative of cadres of the Riung Health Center Technical Implementation Unit, Cisaranten Kidul Village and Cisaranten Kidul Village PKK, with material assistance and guidance from PT. Pertamina and the Government of Bandung City.

The stunting rate in West Java is still higher than the national level. Cisaranten Kidul Urban Village has a high prevalence of stunting. In 2013, of the 29 cases of stunting in Gedebage District, 19 cases occurred in Cisaranten Kidul Urban Village.

OMABA Cooking Center produces healthy meals for the consumption of severely malnourished children targeted by the Supplement-Recovery Feeding (PMP-T) program. The processed products from OMABA's kitchen were then sent to the children using motor transportation. This program was triggered by the impression that the implementation of the PMT-P program in this urban village was ineffective, because the food provided in the form of formula milk was often not consumed by the target children, but was sold to small shops. In addition, the limited food budget for targeted children is also an obstacle,

especially considering the scattered locations of the targeted children. The OMABA program specifically helps food access for children who are stunted and helps ensure good nutrition. The target of this program is children who have previously received PMP-T assistance but have not experienced a change in weight growth.

The OMABA program also demonstrates that collaboration between the government, the private sector and the community can help create positive results for government programs. Community participation in food preparation and assistance not only creates attractive and healthy nutritional intake for target children, but also ensures that food reaches the children targeted by the PMT-P program. Participation in this program, both as recipients and implementers, has also created awareness in the community about the importance of good nutrition for children.

6. Bandung Tanginas

By PKK of Bandung City, West Java

Non-governmental organizations also play an active role in efforts to reduce stunting. One of the best practices is the Bandung Tanginas Program (Bandung Responds to Stunting with Safe and Healthy Food) from the Bandung City PKK Steering Team and the Bandung Sehat Forum. The main activities of this program include the socialization of stunting prevention in 30 sub-districts, provision of healthy food intake, capacity building for posyandu cadres, and the Friday Fortune Call. These activities were carried out in partnership with related agencies in the City of Bandung and received funding assistance from several institutions such as the Bandung City Baznas, Bandung City IZI, and Pegadaian Syariah.

In order to achieve Bandung zero stunting, specific interventions were carried out for pregnant women, breastfeeding women, under-five and toddlers, as well as sensitive interventions with economic strengthening through training for stunting families as an independent effort to increase family income. The activities include:

Picture A3.
Documentation of Bandung
Tanginas Program

Social media:
@tp_pkk_kota_bandung
#bandungtanginas

1. Socialization of stunting prevention in 30 districts
2. Providing healthy food intake for pregnant women, breastfeeding women, under-five and toddlers (Zero New Stunting)
3. Capacity building for posyandu cadres: basic health services for pregnant women and children (measuring, weighing, providing counseling),
4. Successing a family-based, community-based independent food house (RPM), within Buruan SAE neighborhood: supported by a menu creation competition and Buruan SAE photo competition,
5. Providing training for stunting families as an independent effort to increase family income: training in sewing and hair shaving (20 people per district),
6. Friday Fortune Call: calling pregnant women/ breastfeeding women/parents of under-
7. Bandung SAE Movement (Exclusive Breastfeeding Sadayana): a campaign effort to increase public awareness of exclusive breastfeeding for infants of 0-6 months. Supported by the preparation of an ASI draft plan by the Government of Bandung City.
8. 100 percent ODF movement in Bandung City

In its implementation, this program involves various stakeholders, namely: Bappelitbang, the Office of Population Control and Family Planning, the Office of Women Empowerment and Child Protection, the Health Service, the Agriculture and Food Security Service, and the Kominfo Office. The sponsors of this activity are Baznas of Bandung City, IZI of Bandung City, Pegadaian Syariah, BJB, Rumah Zakat Indonesia.

The beneficiaries of this program include 17,476 posyandu cadres from 1,998 posyandu, 3775 stunting families (pregnant women, breastfeeding women, under-five, toddlers) and 3,775 RWs. The result of this activity is an increase in the nutritional status of the community, especially the stunting target of 1000 HPK; increasing knowledge of cadres and the community about stunting, its causes and ways to prevent it; increasing economic independence of the community and the target families with stunting children, increasing the number of infants who are exclusively breastfed.

The challenges of this program include minimal budget and difficulties in changing people's habitual behavior patterns. This activity is very likely to be replicated in urban and rural areas.

7. Stunting Free Village

By Rumah Zakat

One other best practice carried out by community organizations is the Stunting Free Village Program, which is implemented by Rumah Zakat. The main activity of this program is strengthening the capacity of village health cadres to maximize efforts to fulfill nutrition and reduce the factors that cause infection; with target beneficiaries include toddlers, pregnant women, and breastfeeding women. One of the results of this program is the increased awareness of the community and cadres about the nutritional needs of children under five and the ability to process complementary foods according to nutritional needs.

Stunting-Free Village is a program pioneered by Rumah Zakat, covering 186 villages in Indonesia, starting from January 1, 2020 to December 31, 2020. Indonesia has serious nutrition problems in children under five. The prevalence of stunting, wasting, and underweight among children under five is still quite high, especially in rural areas. Rumah Zakat intends to contribute in dealing with these nutritional problems.

Stunting-Free Village is an effort made by the community to free Indonesian children from the threat of stunting, through strengthening the capacity of village health cadres to maximize nutritional fulfillment and reduce infection-causing factors. The targets of the Stunting Free Village are toddlers, pregnant women and

Picture A4
Documentation of Stunting Free Village Program and example of its pamphle

breastfeeding women. This program assists 526 posyandu throughout Indonesia. Activities in the Stunting-Free Village include monitoring the growth and development of children under five, providing additional nutrition, providing intensive nutrition for toddlers with nutritional problems, facilitating access to health services for toddlers with comorbidities, and providing additional supplements. In addition, there are activities for pregnant and breastfeeding women in the form of supplementation, supplementary feeding, education, nutrition consultation and mentoring. Education and workshops/training were also held for cadres or free stunting agents.

Activities in the Stunting Free Village began with a data collection process and coordination with related stakeholders such as the Puskesmas and the local village government. The next process is building Rumah Gizi to provide complementary foods. The provision of complementary foods employs mutual cooperation system, where products are sold to families who can afford

it and the benefits will be given to toddlers who have nutritional problems. In addition, the program provides Mother Class for Toddlers, cooking classes and regular monitoring of the toddler's weight and height.

Throughout 2020, the Stunting-Free Village Program has assisted 2,366 Posyandu cadres and held 466 training for them. Through this program, assistance was provided to 18,725 children under five, 496 with stunting, 72 with wasting and 204 with underweight. The program also provided counseling for mothers about child nutrition and immunization to 224 children under five. The Stunting-Free Village also makes the community and cadres better understand the nutritional needs of children under five, and are able to process

complementary foods according to nutritional needs.

The lessons learned in implementing a Stunting-Free Village is the limited program implementation due to the COVID-19 pandemic. Toddler monitoring activities were carried out by visiting the toddler's house directly or to a limited number of associations.

This program can be replicated and carried out in other areas with the same process, starting from data collection to program implementation and can be carried out similarly. The opportunity for replication is quite large, as can be seen from the distribution of the program, which to date has reached 186 points throughout Indonesia.

GOAL 3

GOOD HEALTH AND WELL-BEING

LIST OF GOOD PRACTICES FOR GOAL 3

1. 5NG Program (JateNG GayeNG NginceNG WoNG MeteNG)

By Government of Central Java Province

This program was carried out by the Government of Central Java Province since 1 January 2016 and is still ongoing today. The purpose of this program is to increase the awareness of Central Java residents to monitor pregnant women living in the vicinity, given that the Maternal Mortality Rate (MMR) and Infant Mortality Rate (IMR) in Central Java Province are still high.

The activity includes observation and monitoring of the mother's condition which is divided into 4 (four) phases, namely: (1) the pre-pregnancy phase, (2) the pregnancy phase, (3) the labor phase, and (4) the postpartum phase. Health conditions and nutritional consumption of pregnant women will continue to be monitored by health workers.

The positive impact of this program

is that there has been a significant decrease in MMR and IMR in Central Java Province. MMR decreased by 14% per year and IMR decreased from 5,485 (2016) to 4481 (2018). The success of this program attracted USAID's attention to provide additional funding through the Jalin program. With the collaboration of USAID and 5NG, it is hoped that the impact of this program will be wider so that it can reduce stunting, improve food and conditions for pregnant women and babies.

- <https://jatengprov.go.id/publik/pandemi-covid-19-jangan-abai-nginceng-wong-meteng-dan-imunisasi-anak/>

Replication opportunities in other areas are still possible. Moreover, with the assistance from the central government, local government and the private sector, the positive impact will be felt by other local communities.

2. Youth innovations in the field of HIV digital information technology

By UNAIDS

Picture A.5
Ask Mario feature Documentation

Young people are an age group at high risk of HIV in Indonesia. Based on data on the HIV epidemic in Indonesia, of the 32,000 new HIV infections, as many as 50% came from young people aged 15-24 years. Through this program, UNAIDS hopes to be able to reach young people to get information about HIV based on technology and social media.

UNAIDS launched “Ask Marlo” and “I Dare” programs where people can ask questions about HIV and get answers instantly. Counselors can also be accessed via chatbots, social media and this website page. So, this program received appreciation from the Indonesian Ministry of Health and the DKI Jakarta Health Service.

More than 800 people have been referred to HIV testing services in Indonesia. The “Ask Marlo” and “I Dare” programs have been accessed in 20 districts/cities. Opportunities for replication of this activity are additional counselors in areas with a high HIV epidemic level. The cooperation between the government and the private sector is expected to increase the effectiveness of this program.

3. Unlearning Ableism Human Rights Day 2020

By SCORP-CIMSA

Human Rights Day 2020 was held by SCORP-CIMSA with the theme “Unlearning Ableism”. Ableism is all forms of discrimination or prejudice against persons with disabilities. The general public considers ableism to often occur and affects the daily lives of persons with disabilities, however, they are still less aware of issues related to the issues, rights and protection of persons with disabilities against ableism.

Therefore, SCORP-CIMSA, which is an organization of medical students in Indonesia, carries the theme “Unlearning Ableism” to increase the role of youth in action against discrimination and promote equal rights for persons with disabilities in Indonesia.

The activity includes social media campaign on the Instagram platform @cimsaindonesia,

Picture A7
Documentation of Human Rights Day
Online Conference

quizzes, twibbon challenges, video interviews with administrators of the Indonesian Association of Persons with Disabilities (PPDI) and Amnesty International, ending with Instagram Live with Marthella Rivera and Rezki Achyana as inspirational young figures with disability accompanied by Sign Language Interpreters to discuss challenges of equality rights for persons with disabilities in Indonesia. Live Instagram was watched by >400 accounts and reruns of this activity were viewed by >1,100 accounts.

These activities make it possible for organizations or individuals who have concerns in the field of human rights to participate. The platform that is currently used by the public to conduct various webinars or online counseling makes this activity easy to replicate with various innovations that can be added. Unlearning Ableism can be one of the pioneers in voicing the equal rights of persons with disabilities.

4. Muhammadiyah COVID-19 Command Center (MCCC): Muhammadiyah's Contribution in Handling Covid-19

By Muhammadiyah

Muhammadiyah COVID-19 Command Center (MCCC) is a special team formed by the Pimpinan Pusat Muhammadiyah (Muhammadiyah Central Leadership) to handle COVID-19. Various programs for handling COVID-19 have been carried out by Muhammadiyah-'Aisyiyah as a form of contribution from civil society in overcoming the COVID-19 problem.

Since COVID-19 cases began to be found in Indonesia, Muhammadiyah and 'Aisyiyah have provided a hospital that is a referral service for handling COVID-19. To date, 86 number of Muhammadiyah and 'Aisyiyah Hospitals continue to provide COVID-19 case services in 12 provinces (DIY, Central Java, West Java, East Java, DKI Jakarta, Lampung, South Sumatra, West Sumatra, Central Kalimantan, South Kalimantan, South Sulawesi, and West Nusa Tenggara).

As of 16 May 2021, as many as 3,774 Orang dalam Pengawasan/ODP (Person Under Supervision), 3,366 Pasien Dalam Pengawasan /PDP (Patience Under Supervision), 2,684

Probable, 13,914 suspects, 17,820 people are confirmed positive for COVID-19 have been treated at 86 Muhammadiyah-'Aisyiyah Hospitals. In addition, there are self-isolation services provided by Muhammadiyah-'Aisyiyah in DI Yogyakarta and Jakarta with a total of 648 service users. Regarding the COVID-19 vaccination program, a total of 60 Muhammadiyah-'Aisyiyah hospitals have vaccinated 68,208 people.

In the provision of health services, Muhammadiyah-'Aisyiyah distributed masks, gloves, N95 masks, cover all, cloth masks, goggles glasses, rapid tests, face shields, long plastic, and shoe covers to Muhammadiyah-

'Aisyiyah hospitals and clinics.

In handling COVID-19, Muhammadiyah-'Aisyiyah has initiated various programs for the community, such as: distributing masks to 1,140,936 people; spraying disinfectants at 49,211 points; distributing hand sanitizers to 898,367 people; providing ready-to-eat food to 61,878 people; serving 41,558 patients; cash assistance of IDR 959,666,500; distributing rice assistance of 26,160 kg; free sahoor and takjil to 12,920 people; distributing infrared thermometers; distributing disinfectants to 2,895 people; distributing portable sinks assistance to 26,500 people; dissemination and education to the broader community, providing psychosocial services to 1,788 people, providing guide books for worship during the COVID-19 pandemic,

providing Muhammadiyah self-isolation shelters, providing COVID-19 guidebooks, providing food security programs, distributing vegetable seeds to 20,000 people, providing educational program by using cars, providing call center services, providing volunteer education, and distributing medical devices.

Muhammadiyah-'Aisyiyah collaborated with various parties in handling Covid-19, and collected donations, one of them is through Lazismu. The total donations collected were IDR 30,946,853,464 and Lazismu Center's donations were IDR 8,948,388,508. From the various programs that have been implemented by MCCC, the total value is IDR 346,331,834,234, with a total of 31,907,519 beneficiaries.

5. Community Tuberculosis Care Support for people affected with Tuberculosis through a pilot Mental Health and Psychosocial Support program

By 'Aisyiyah

Since COVID-19 pandemic emerged, most Tuberculosis patients and people affected with TB often face increasing fear of being infected by Corona virus – apart from the fear of Tuberculosis itself. In order to help addressing this problem, 'Aisyiyah, through its Community Tuberculosis program established a pilot project called Mental Health and Psychosocial Support (MHPSS) in October 2020.

MHPSS used the basic knowledge and skills of Tuberculosis patient supporters and case managers in assisting TB patients through every treatment. These basic skills were enriched with the collaboration of Muhammadiyah COVID-19 Command Centre (MCCC) who offered their psychologists to provide necessary counselling. While MCCC provided psychologist in the national level for online specialist counselling, 'Aisyiyah provided volunteers in 14 provinces to perform an online/virtual Psychological First Aid (PFA) and refer more complex mental and psychosocial cases to the psychologist.

These volunteers were recruited and given brief training and workshop about how to assess the stress level of the clients and how to provide the PFA. The workshop was done on the same event with the launching of the program. It was attended by all the PFA volunteers, patient supporters, and some representatives of Tuberculosis patients and families. The launching event's main purpose was to introduce the MHPSS services to the Tuberculosis -affected people so that they know where to seek help whenever they feel the fear of the stress.

The results obtained were:

1. 15 PFA volunteers were recruited with one in national level, and the other 14 in 'Aisyiyah's Community TB care program areas,

2. By the end of the 6-week pilot program, there were 8 cases recorded and handled by the PFA volunteers; 4 cases were from female TB patients, and the other 4 were from male TB patients,
3. The discovery of mental and psychosocial problems among Tuberculosis patients such as: (a) their lack of knowledge and information regarding how to deal with the TB treatment services and side effects; (b) stigma towards themselves that was induced by the fear of stigma from their societies; and (c) the fear of going to the

health facilities due to COVID-19 pandemic.

From this pilot program, we know that MHPSS can be very beneficial and effective for Tuberculosis -affected people (especially during this COVID-19 pandemic) if only it had more time to implement so that it could reached more broader Tuberculosis-affected people. In addition, had the PFA volunteers enough knowledge and capacity of Tuberculosis care and prevention, the program would have run more easily and more people would engage in the program.

6. Tuberculosis cadre stories

By Aisyiyah

In 2020, 'Aisyiyah's Tuberculosis Care program has had over 5000 active cadres who have been involved as the front liners in the Tuberculosis case finding, contact investigation, and TB treatment assistance. Some of these cadres are former Tuberculosis patients who aspire to take part in the Tuberculosis elimination program. Some others are also one of the essential parts in 'Aisyiyah board members.

The former TB patient who became cadre was Marzuki, a 35-year-old man from Probolinggo district. He was really eager to educate the society where he came from about what TB is and how it can be dangerous if people are not well-aware about this disease. Other than that, he knew it first-hand how it feels to be in Tuberculosis treatment and how essential it is to have social and family support during the treatment.

Marzuki established DINDA WOW (*Didatangi, Nasehati, Dampingi Warga Oleh dan untuk Warga*) which basically consisted of 30 members included housewives from his society and focused on the door-to-door Tuberculosis education and stigma eradication. This innovation has become indispensable approach in Puskesmas Tegaliswan, Probolinggo in case finding and Tuberculosis education.

One 'Aisyiyah organization members who became cadre was Siti Maria, a 67-year-old woman from Medan, North Sumatera. She was one of the oldest cadres who have been the front-liners of Tuberculosis program since the beginning of 'Aisyiyah's Tuberculosis program in 2009. Despite her age, she still has strong courage to take part in Tuberculosis elimination program in Medan. She has various ways to educate people about Tuberculosis – from local faith-based gathering, to schools. She also is actively involved in helping Puskesmas to deliver medication to the patients, and any other activities to support the Tuberculosis treatment success.

Maria was lucky, she is still healthy, strong, and has 4 children and 9 grandchildren who have always been supporting what she does until today. It is all because of the persistence and success in assisting and supporting Tuberculosis patients after 10 years of being a cadre in Medan. In 2020, she was given appreciation of being the best cadre from 'Aisyiyah due to her persistence and perseverance.

GOAL 8 DECENT WORK AND ECONOMIC GROWTH

LIST OF GOOD PRACTICES FOR GOAL 8

1. Mamuju MSMEs become Independent and Successful After the Earthquake

By Indonesian Institute of Small and Medium Enterprises Strategic Study (LKS UKMI)

At the beginning of 2021, there was an earthquake which affected people in Mamuju District, West Sulawesi. In the middle of the recovery process due to the impact of the COVID-19 pandemic, this incident paralyzed the economy, including MSMEs in this area. This encourages various parties to move to help the recovery process of MSMEs in Mamuju District, including the Indonesian Institute of Small and Medium Enterprises Strategic Study (LKS UKMI).

Picture A8
Documentation of LKS UKMI Activities

Source: LKS UKMI

LKS UKMI is an institution that is engaged in fostering and developing MSMEs in Mamuju District, West Sulawesi since October 2010. This institution has collaborated with the BUMN Creative House as part of the BUMN Ministry program until 2017 to work together to develop MSMEs, help them grow, be independent and

successful. In the process of awakening from the impact of the pandemic and earthquake disaster, as the progenitor of MSMEs in Mamuju, LKS UKMI tries to continue providing assistance to MSME actors. Even though the conditions were not as comfortable as before, LKS UKMI still tried to become a home for MSMEs in Mamuju.

As a result of the earthquake, the LKS UKMI Building was destroyed and could not be used as a place to market MSME products. Therefore, LKS UKMI is currently focused on rebuilding houses for MSME actors. LKS UKMI also continues to develop previously designed coaching programs and create new programs that are more applicable and strategic. In addition, LKS UKMI also presents a showroom and prepares production tools for MSMEs as well as presenting MSME products in Mamuju tourism destinations. In its activities, LKS UKMI also collaborates with local agencies and related stakeholders. Its activities are focused on helping MSMEs that produce food and beverages, clothing, and handicrafts.

This post-earthquake recovery program will be implemented between 1 July 2021 – 1 July 2022. In its implementation, LKS UKMI will also focus on presenting a digital economy ecosystem for MSME players in Mamuju. The hope is that in the short term, this program will be able to help MSMEs in Mamuju to become independent and successful again so that they can improve the social and economic welfare of the community. This program can also be applied to other areas experiencing disasters in Indonesia so that they can become a resilient economic center.

2. Local Innovation, Love Your Local Products: Endek Goes International

By Chairman of the Bali Province PKK Steering Team, Industry and Trade Office, Regional National Craft Council

As an area that is very popular with its tourism, Bali is an area that has been severely affected by the pandemic because not only the tourism sector but also other supporting sectors have felt the impact of the reduced tourist visits during the pandemic period. One of those affected is the craft-producing MSME players in Bali. Therefore, efforts to rise from the pandemic period are carried out in order to empower MSME actors and improve community welfare.

One form of this effort is to encourage campaigns and innovations to love local products, namely the Endek fabric, which is one of Bali's cultural heritage. This innovation aims to increase the marketing of Endek Bali handicrafts by utilizing information technology so that it is more recognized at the international level. This innovation was carried out by the Head of the Bali Province PKK Steering Team, the Department of Industry and Trade in synergy

with the Bali Regional National Craft Council (Dekranasda), which is supported by other parties such as the Office of Cooperatives, Small and Medium Enterprises, the Regional Development Planning Agency, the Financial and Regional Assets Management Agency, Banking Parties, and Balimall (e-marketplace).

This program focuses on mentoring, coaching and assisting Endek craftsmen MSME. In addition, this program also facilitates the fulfillment of production raw materials and capital as well as marketing to penetrate the export market. In this program, Endek handicrafts are modified to attract domestic tourists by applying Endek in the form of ready-to-use creative products such as apparel, bags, wallets and sandals. On the other hand, Endek is also produced in sheet fabric which is more attractive to foreign tourists.

Picture A9. Signing of the Memorandum of Understanding (MSP) regarding the Statement of Intent between the Bali Provincial Government of the Republic of Indonesia and Christian Dior Couture S.A

Picture A10. Fashion Show for the Spring/Summer 2021 Collection at the Paris Fashion Week Using Endek Fabrics

As an effort to revive MSME products in the midst of a pandemic, MSME players are facilitated through exhibitions with a hybrid pattern, namely a combination of “offline” and “online” to introduce superior products. This activity aims to provide space for local designers to continue working to raise the potential of Balinese traditional woven fabrics as well as to encourage MSME players to produce products that can promote Balinese “brand”. In terms of payment transactions, this activity is also supported by Bank BPD Bali with Bank BPD Bali QRIS service which is a banking service for Bank BPD Bali in the context of implementing the Standard National Quick Response Code for non-cash payment transactions.

One of the moments that Endek is known for at international events is when Christian

Dior uses Endek as one of the elements of his collection which is exhibited at Paris Fashion Week 2020. Seeing this opportunity, the Governor of Bali, Wayan Koster, together with Senior Vice President General Counsel, Marie Champey, made a cooperation agreement to promote expressions of traditional Indonesian culture, especially the use of Balinese Ikat Endek Weaving in Dior products in early 2021. In this agreement, it was agreed that the Endek Balinese cloth or wastra used shall be handmade by weavers in Bali using a loom. In addition, Christian Dior also fully respects the Intellectual Property Rights (IPR) of Endek Bali cloth. This agreement will further introduce Endek crafts and Balinese culture in general to foreign communities and is expected to be able to encourage economic recovery in Bali.

3. COVID Response by Sampoerna

By PT HM Sampoerna Tbk

The COVID-19 pandemic besides having a fairly large impact on the economy, thus encouraging the active involvement of various parties to overcome this impact. Through the umbrella of Sampoerna's sustainability program for Indonesia, PT HM Sampoerna Tbk has taken an active role in reducing the spread of COVID-19 by providing support for employees, business partners and communities in operational areas. In implementing its programs, Sampoerna collaborates with corporate social responsibility partners such as the Stapa Center, the Rumah Kita Foundation Sidoarjo, the Senyum Untuk Negeri Foundation and the Business Export Development Organization (BEDO), as well as the Task Force for the Acceleration of COVID-19 Handling, the National Disaster Management Agency (BNPB), KADIN, as well as national and regional governments.

In the early stages, a mapping of the needs in Sampoerna's operational areas was carried out (in the context of this program, in Java and Bali). Then, Sampoerna distributed assistance to various hospitals and communities, in the form of 8,900 complete personal protective equipment, more than 13 million medical/non-medical masks, building more than 55 hand washing facilities, thousands of liters of disinfectant liquid, more than 385,000 hand antiseptic fluids, distributing 19,500 food packages and more than 140 tons of rice to the community. Sampoerna also donated 7 PCR machines and accessories and 14 ventilators.

Sampoerna is also committed to continuing support for MSMEs in Indonesia through more than 130,000 traditional grocery stores that are members of the Sampoerna Retail Community (SRC). Assistance was provided in the form of education on health and safety protocols, distribution of more than 650,000 non-medical masks and 80,000 liters of hand sanitizers, and creation of cashier partitions to ensure

physical distance from consumers. On the other hand, Sampoerna through the Sampoerna Entrepreneurship Training Center (SETC) which has been operating since 2007, provides online training that raises the topic of practical ways for MSMEs to survive during a pandemic. In addition, support is also provided in the form of food security and developing productive synergies with several stakeholders related to accelerating national economic growth through increasing the competitiveness of MSMEs. Sampoerna also paid attention to former Indonesian migrant workers affected by the pandemic by providing assistance in the form of 10,000 hygiene packages consisting of 20,000 non-medical masks, 10,000 bottles of hand sanitizers, and 10,000 drawstring bags made by SETC-assisted MSMEs.

Until December 2020, Sampoerna noted that the beneficiaries of this program, including hospitals, medical personnel and the general public, were as many as 1 million beneficiaries. In its implementation, increasing public awareness of the importance of implementing applicable health protocols is a challenge that needs to be faced. This program can be replicated by increasing the collaboration of more parties and at various levels of society.

4. Inclusive Sustainable Economic Development (ISED)

By Ministry of PPN/Bappenas and GIZ

This program is a collaboration between Indonesia and Germany through Bappenas and GIZ to implement an inclusive and sustainable business model. This includes developing the human resources needed to strengthen the capacities of actors and create jobs in the private and public sectors. ISED seeks to support and promote an inclusive and sustainable job market.

In general, this program is implemented through several strategies, namely (i) formulating policies for inclusive job creation; (ii) strengthening labor market supply at regional and sectoral levels; (iii) expanding the implementation of an inclusive and sustainable business model; and (iv) increasing cooperation between the government and the private sector. This program involves ministries and institutions such as Bappenas, Ministry of UKM, Ministry of Creative Economy, Ministry of Industry, Ministry of Villages and PDT as well as other parties such as the NTB Regional Government, KADIN, the private sector, academics, and village communities. The targets of this program are people in Bilebante Village, Central Lombok, West Nusa Tenggara Province as well as business actors and workers in the tourism and manufacturing sectors.

This program is able to increase skills and job opportunities for business actors and workers, increase business and employment in the tourism and manufacturing sectors, and increase inclusive business in the tourism sector in NTB. The implementation of the program encountered several challenges, including the lack of community awareness to do business and work as well as the minimal involvement of village communities in village development. On the other hand, cooperation with the private sector to hold training is also quite challenging to implement. ISED also prepares an exit strategy in the form of a village development guide that can be used as a reference for other stakeholders. In general, this activity has the opportunity to be replicated in other potential villages as well as collaborating with other parties.

GOAL 10

REDUCED INEQUALITIES

LIST OF GOOD PRACTICES FOR GOAL 10

1. Mentor Facility to Investigate and Prosecute TIP Crimes in Indonesia

By International Organization for Migration (IOM)

Since 2007, Indonesia has shown its commitment to eradicate the Crime of Trafficking in Persons (TIP) by enacting Law Number 21 of 2007 concerning the Eradication of TIP and instructing the government at the national and regional levels to form an Anti-Trafficking Task Force (ATTF) through a Presidential Regulation No. 69/2008, and in addition to existing laws, in 2009, the Government of Indonesia ratified the Palermo Protocol. While substantial efforts have been made to improve the protection and criminal justice system for victims of trafficking through the involvement of law enforcement agencies in the ATTF, Indonesia has shown limited progress in investigating and prosecuting TIP cases as reported by the US Department of State Trafficking in Persons Report 2019.

Although there has been some progress in the number of cases investigated, the rates of sentences imposed on perpetrators are less than permitted under the Criminal Code, and prosecution has focused primarily on individual perpetrators rather than transnational crimes, syndicates or end user companies. Some of these limitations have been highlighted in a legal review of the implementation of Law No.

21/2007 conducted by IOM and passed by the Attorney General of the Republic of Indonesia in August 2016. This legal review highlights several aspects related to the criminal justice sector such as: the need to improve the quality of victim-witness statements, increase efforts to trace the property and assets of the perpetrator, increase efforts to provide state compensation for victims of trafficking if provided with restitution. The law can neither execute nor prosecute superiors for their role in a TIP case, brings to trial legal entities with legal status or improves intra and inter-agency coordination.

In the process of implementing this activity, IOM has supported the Government of Indonesia to develop a TIP Investigation and Prosecution Manual, as well as Guidelines for Law Enforcement and Protection of Witnesses and/or Victims in Handling the Crime of Trafficking in Persons. IOM also trained 161 prosecutors led by 7 trained trainers across the country on handling TIP cases, in line with Law no. 21/2007, where the need to continue capacity building in the prosecution of TIP can be widely observed outside the project.

Furthermore, in the 2018 to 2020 period, IOM and the Government of Indonesia have designed, developed and launched a sustainable capacity building program for prosecutors through an innovative Mentor Facility that pairs experienced prosecutors or mentors with students. The Mentor Facility is a programme for experienced TIP practitioners to guide their counterparts in a sustained, hands-on, and practical manner in handling TIP cases. In coordination with the Attorney General's Office Center for Education and Trainings (BADIKLAT), IOM developed the e-learning platform that are used as one of the learning tools by the selected mentors and protégés during the pilot of the facility. The e-learning platform was used by the mentors and protégés to learn all elements of TIP proceedings and resources on handling TIP cases. It serves as an interactive platform for protégés to obtain information and consult with experienced mentors on TIP issues and case handlings. Each of the six interactive materials in the e-learning platform were also available in a webinar format and equipped with post-material tests to measure the understanding of protégés towards the material in the e-learning platform. There were 14 protégés directly selected by BADIKLAT, who were all required to take a final test to obtain a certificate of completion.

As part of the Mentor Facility programs, IOM facilitated 14 in-person meetings between the mentors and protégés from December 2019 to February 2020. The meetings were organized to support each pair of mentors and proteges, and served as a place for in-depth mentoring, case troubleshooting, and networking opportunities. Some protégés took this opportunity to seek practical guidance from their respective mentor on the TIP case they were handling. Some of them also used the meeting to re-share the TIP-related information gained from the Mentor Facility to other prosecutors or even to the community nearby.

In March 2020, the evaluation meeting on the implementation of the Mentor Facility offered several recommendations that could be useful

for improving the criminal justice system in prosecuting TIP cases. These recommendations consist of:

1. Establishment of an open access knowledge sharing platform with TIP-based topics to increase the capacity of law enforcement officials,
2. Increase the capacity of law enforcement officers to investigate TIP with basic investigative skills in following procedures for confiscating money and assets, and
3. Improve intra and inter-institutional coordination to support the investigation and prosecution process, including through integrated policies in the field of criminal justice, especially in restitution and asset confiscation.

In addition, all participants agreed that the whole programme was effective, especially for the protégés since it allowed them to still actively learn without having to hold off their main duty as prosecutor in their office. The protégés also pointed out other benefits from the programme, for instance they could discuss active cases directly with TIP experts and experienced prosecutors through various platforms offered in the programme including through webinars and the WhatsApp group. As a result, all protégés agreed that the programme has been helpful and practical since the knowledge could be applied directly to their work. In fact, many prosecutors protégés have been considered as TIP experts in their respective office due to their good knowledge on TIP issues.

2. Advancing Measures to Prosecute TIP (AMPUH)

By International Organization for Migration (IOM)

The 2019 TIP report notes ongoing gaps, such as a reduced number of investigations, prosecutions and punishments for TIP cases, low availability and lack of coordinated implementation of rehabilitation services for VOT, reduced allocation of adequate resources for anti-TIP efforts at the national and local levels, lack of robust victim identification procedures. Indonesia is the source, transit and destination country of TIP which affects men, women and children throughout the country. TIP for the purposes of forced labor, child sex trafficking and forced marriage are very common. Through the ongoing AMPUH project, IOM will contribute to the overall efforts put forward by the Government of Indonesia, particular through:

1. **Strengthening the capacity of the Government of Indonesia to effectively prosecute TIP crimes,**
2. **The Indonesian government and CSOs proactively identify and protect VOT through a referral mechanism,**
3. **Trafficking survivors are economically independent, psychosocial stable equipped to face (Return) the drivers of migration**

First, this program is aimed at strengthening the capacity of the Government of Indonesia in prosecuting TIP crimes effectively. Thus, through the project, IOM collaborates with the Supreme Court to develop the training manual for judges on TIP and will provide capacity development activities for judges on TIP prosecution. In addition, IOM will closely work with law enforcement agencies, the judiciary, and the Coordinating Ministry for Political, Law and Security Affairs of the Republic of Indonesia to establish an integrated data system on the investigation, prosecution, and punishment of TIP. As complementary efforts, IOM is currently developing training materials and will later conduct trainings for university legal clinic practitioners to provide legal counseling and pro-bono assistance to VOT.

To achieve the second objective, IOM with the Ministry of Women Empowerment and Child Protection, as the daily chair of the National Anti-

Trafficking Task Force, are updating the SOP on integrated services for victim and/or witness of TIP. Following this, a series of trainings will be held for service providers at the national and local level on victim identification and referral to rehabilitation services and comprehensive assistance as in line with the updated SOP.

As the third component of the project, IOM will continue to complement the government's fund to deliver tailored assistance to victims of trafficking. The assistance will aim towards trafficking survivors' economic independence, recovery of their social and psychosocial state, in order to equip them in facing the drivers of migration. In providing the direct services, IOM works closely with NGOs and government service providers to ensure the fulfilment of victims' rights. In parallel to this, NGOs service providers' capacities will also be developed to provide victim-centered and trauma-informed services.

GOAL 12

RESPONSIBLE CONSUMPTION AND PRODUCTION

LIST OF GOOD PRACTICES FOR GOAL 12

1. Community-Based Independent Trash Management

By PT. Pindo Deli Pulp and Paper Mills – Karawang (APP Sinar Mas)

Even though the Indonesian government has taken initiatives for waste management, this problem cannot be resolved without the awareness of community members about responsible waste management. Changes in the mindset and behavior of both individuals and society in general, especially in managing waste responsibly, are the main things needed to achieve success in solving the waste issue in Indonesia. PT. Pindo Deli Pulp and Paper Mills (PDK), as one of the companies under Asia Pulp & Paper (APP) Sinar Mas identifies waste as one of the main problems of the community around its area. In 2016, PDK developed a community-based independent waste management program through the formation of a waste management group called “Sahabat Lingkungan Independent Garbage Group (KSM)”. This program is focused on around 300 households, especially in Sukaluyu Village, Karawang District. Not only collecting waste, this KSM develops its goal of turning waste into economic opportunities.

Picture A11
Trash management

This program maintains close coordination with the local government, which provides support in the form of construction of trash bins, composter machines and the purchase of motorbikes for waste collection activities. Until 2019, around 3,150 households have been involved in this program. The beneficiaries of this program are the people around Sukaluyu Village, Karawang District, totaling around 7,000 families. Sahabat Lingkungan KSM is able to get a net income of

around IDR 6,000,000 per month from the sale of non-organic waste to the recycling industry. This group is also able to create jobs such as scavenging, as well as other job opportunities in the facility. The net income earned by the group is used for infrastructure projects and to expand their activities to other fields by cultivating catfish. For each catfish harvest cycle, this group is able to generate income of IDR 20-25 million with a net profit of IDR 6-8 million. This waste bank group has been running for about 4 years and receives about 2 tonnes of waste every day collected from 7,000 households.

KSM collaborates with various stakeholders such as the Environmental Office, Public Works and Public Housing Office, the Ministry of Environment and Forestry (KLHK), the private sector and universities. This collaboration is a strategic step to ensure program development and sustainability. During the COVID-19 pandemic, the waste bank operational activities continued as usual. Sales of sorted waste which have economic value have decreased slightly due to reduced demand from partners. Even so, Sahabat Lingkungan KSM continues to support community-based waste management

activities in other locations. One such initiative is the development of TPS3R in Kuta Negara Village supported by the Ministry of Public Works through the Citarum Harum Program, which aims to replicate community-based waste management as managed by Sahabat Lingkungan KSM. This integrated waste management program is a clear example of how local communities can contribute significantly to achieving the national target of reducing plastic waste by 70% and managing 70% of waste by 2025.

2. Overcoming Waste Problems through Community-Based Waste Banks

By PT. Eka Mas Fortuna (APP Sinar Mas)

Garbage is generally seen as dirty with no value. This limited thinking is what causes waste management in Indonesia to lag behind other countries. Waste management in general still follows the concept of collect, transport, throw away - which causes most of the waste to end up in the landfill. The accumulation of garbage without proper management requires additional space for landfills, which results in the need for expensive equipment to protect the surrounding environment from its negative effects, especially odors. In collaboration with the Gampingan Bersinar Waste Bank Group, the Malang District Environmental Office and the Garbage Entrepreneur Association, PT. Ekamas Fortuna as a part of Asia Pulp & Paper (APP) Sinar Mas through its CSR program initiated a waste bank program in the Malang District area.

The program was initially implemented on privately owned land, but as its development has progressed, this program has been transferred to community-owned land and is supported by the entire village. This program is designed to address educational and socialization issues related to waste collection and management for the entire community. Gampingan Bersinar Bank Group hires scavengers to collect garbage from households, schools, health centers and businesses. Once collected, the amount of waste that can be recycled is recorded and then exchanged for money. The Gampingan Bersinar Group then sells the waste to a recycling facility as a source of income. The profits collected are used to finance the operations of the waste bank, the rest is shared among members. PT

Ekamas Fortuna supports group activities through capacity building, provision of new equipment, training and expanding the overall group network. The beneficiaries of this program are the people around the village of Gampingan, which number around 300 families. KSM collaborates with various stakeholders such as the Department of Environment, Ministry of Forestry and Environment, the private sector and universities. This collaboration is a strategic step to ensure program development and sustainability.

Until 2019, 250 households and 15 community organizations in locations such as places of worship, schools, etc. have participated in the waste bank program. The immediate result is a

clean and healthy environment. The Waste Bank is now managed by the village government as one of the Village-Owned Enterprises called BUMDes Gampingan. Based on these initiatives and progress in the field, in November 2019, Gampingan Village was awarded the Main Category in the Village Climate Program by the Ministry of Environment and Forestry.

- Strong commitment from stakeholders is essential to ensure the sustainability of the program. This helps to ensure that the program will have a significant and positive impact on the community, addressing waste management issues in the surrounding area.
- Ongoing community involvement is essential to gain momentum, support and participation, especially in the early stages of the program. Networking is essential to further open collaboration opportunities as well as increase program implementation and reach.

Community-based waste management programs have tremendous potential to be replicated in other areas. The village-owned business model can be an appropriate framework for ensuring the sustainability and development of these programs. A continuous approach to key figures and environmental activists on waste management issues is needed to secure and expand support from the community. This program is designed to support the commitment of the Government of Indonesia to reduce plastic waste by up to 70%, solid waste by 30%, and ensure management of up to 70% by 2025. Even with the COVID-19 pandemic, waste bank operations are still running as usual. This community-based waste bank group continues to advocate for the importance of good waste management to the surrounding community. This program aims to create a cleaner environment without piles of trash and unpleasant odors. In addition to protecting the environment, the community waste bank program has economic benefits, so that it can improve the welfare of the group.

3. Sustainable Palm Oil Project in West Kalimantan

By BASF and HENKEL

To improve the living conditions of the oil palm farmers, BASF and Henkel have been working with Solidaridad since 2016 and are still ongoing today to provide training to around 5,500 farmers in Indonesia. To date, more than 1,700 smallholders have completed training programs as part of the Farmer Field School (FFS) initiative. A total of 1,559 farmers (31% women) have completed FFS courses on good agricultural practices and sustainable agricultural management. This yields an average of 15 to 15.6 tonnes of Fresh Fruit Bunches/ha/year in less than a year. In addition, the FFS Alumni Association has been established to provide sustainable support to farmers. The pilot group of 200 FFS alumni is now working towards the Roundtable on Sustainable Palm Oil (RSPO) certification.

In addition, financial literacy training has increased small farmers' knowledge of money management, responsible use of financial products and services, investment, and encouraged farmers to save for business capital. The median income of 8,785 alumni (of which 57% were women) increased from € 1,460 to € 1,610 per year (+ 10%). The FFS provides 2,400 farmers with certified seed and high-quality inputs, including subsidized fertilizers, through the K77 agricultural cooperative. About 1,400 members regularly receive SMS messages about prices and training as well as the value of the professionalism of the cooperative developed through the capacity building program.

Further information is available at www.henkel.com/palmoil and <http://bit.ly/palm-dialog>.

4. Bumi Maluku Lestari Waste Bank

By PT Pertamina (Persero) DPPU Pattimura

The amount of waste in Negeri Laha is high in volume (approximately 3 tons per day on average) based on the estimated population of 1,075 households. However, the number of bins is limited and there is no temporary trash can available, while public awareness is still low to dispose of garbage in its place. Furthermore, the amount of waste, especially plastic waste sent from the ocean currents, piles up in the area. There is a group called Bumi Maluku Lestari Waste Bank in Negeri Laha which has been established and has been running since 2018 which has management and customers of 40 people. Pertamina has a concern in the environmental sector and Negeri Laha is included in the Ring 1 area of the Pattimura DPPU.

Pattern of community engagement to make the people interested and turn them into loyal customers

Picture A12
Achievement and Challenges of Bumi Maluku Lestari Waste Bank

Strategy: assistance to the Bumi Maluku Lestari Waste Bank group by the CSR team of PT Pertamina DPPU Pattimura, infrastructure support and capacity building for the group's human resources, as well as assisting and bridging the expansion of the stakeholder partnership network. Parties involved: PT

Pertamina DPPU Pattimura, Nature Community, other CSR program assisted groups also run by PT Pertamina DPPU Pattimura, members of the Bumi Maluku Lestari Waste Bank group, DLH Maluku Province, Negeri Laha Government, Negeri Laha Community.

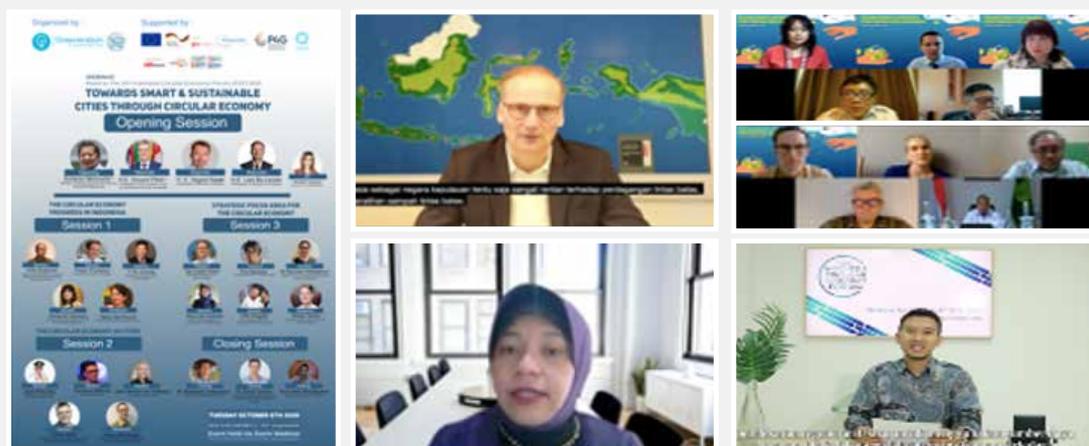

Picture A13
Documentation of Bumi Maluku Lestari Waste Bank Activities

5. Indonesia Circular Economy Forum

By Greeneration Foundation

Circular Economy is a principle that can be used to help achieve the target of Presidential Regulation No. 27/2017 concerning National Strategy and Policy (Jakstranas) for households and household-like waste processing at the national, provincial and district levels, in which the target for waste reduction has been set at 30% and waste management at 70% by 2025. The Indonesia Circular Economy Forum (ICEF), initiated by the Greeneration Foundation, aims to accelerate the transition to the Circular Economy in Indonesia through national and international partnerships. There are four main objectives of ICEF, namely establishing ICEF as the national platform for the Circular Economy in Indonesia, promoting multi-stakeholder commitment and collaboration, promoting international engagement in the Circular Economy, and implementing a circular and sustainable business model in Indonesia.

ICEF was first held in 2017 and takes place annually in partnership with many government agencies in Indonesia, the private sector, associations, communities, and foreign institutions. The total number of ICEF participants from 2017 has reached 1,600 people. Last year, the ICEF pre-event was attended by 848 participants from more than 20 countries. This year, the annual ICEF forum will be held on 21-23 July 2021 with an online scheme with the theme Toward Smart and Sustainable Cities through Circular Economy: Building Resilience during COVID-19 Recovery. In 2020, in connection with the COVID-19 pandemic, the role of circular economy is emphasized in realizing smart and sustainable cities. In addition, a circular economy can contribute to economic recovery without compromising our environmental aspects.

Picture A14
Documentation of ICEF Webinar

ICEF is also a strategic partner of the Ministry of National Development Planning/Bappenas and UNDP in developing the National Strategy for the National Circular Economy in Indonesia. Apart from the annual forum, the 4th ICEF has several series of programs, namely: Circular Jumpstart, National Commitment, and Indonesiacef.id website. Three recommendations to address the challenges of implementing a circular economy in cities include policy & regulation, leadership & commitment, and education & research.

6. Buntah – Soap from Used Cooking Oil

By Tria Fadilla, Gajahlah kebersihan, Buntah.id, KKN of Lampung University in Gumukmas Village

Most of the household and SME sectors still frequently dispose used cooking oil into waterways, even in small amounts. Used cooking oil, commonly known as jelantah, is waste that causes damage due to hydrolysis and oxidation processes. From an environmental perspective, according to the Environmental Management Agency (BPLH), if it is not properly managed, used cooking oil can become B3 waste (hazardous and toxic) which has the potential to poison the ecosystem, disrupt the biological and chemical balance and trigger high pollution due to being discharged into waterways or land. Therefore, a responsible waste management of used cooking oil is necessary to turn it into a more useful product, one of which is used cooking oil soap.

This innovation was initiated by the young generation, Tria Fadilla, involving Gajahlah kebersihan, Buntah.id, Community Service Program (KKN) of the University of Lampung at Gumukmas Village, the Women Farmers Group, Lampung Post, Metro Lampung, the Environmental Office of Lampung Province and Green Hydroponics. During the pandemic, they carried out activities such as promoting or educating through digital platforms and social media, holding offline meetings to discuss further activities and collaborating to carry out the initiative. The number of young people involved in the Buntah program was 15 people.

This program is able to provide assistance in processing waste, especially used cooking oil,

into decorative soap which reduces pollution to the ecosystem. The used cooking oil soap products will increase the average income of the people. The program is also supported through collaboration with community partners, media, and agencies. It helps build the capacity of adults through the women of the Sekar Tanjung farmer group in Pringsewu District by teaching them how to make used cooking oil soap for 10 days, from the planning to the production stage. The number of beneficiaries is currently 30 people. This program will be developed by submitting several proposals for activities with greater impact and starting to carry out monitoring and evaluation stages, used cooking oil banks, building modules, and various other ideas.

GOAL 13

CLIMATE ACTION

LIST OF GOOD PRACTICES FOR GOAL 13

1. Empowerment Grow Green

By Jejak Rimba Raya

This program is carried out in the form of #JejakRimbaRaya campaign to walk a trail together to make the earth, nature, people, & the environment healthier and more conserved through simple Patterns and lifestyles. It also encourages real action to grow green, empower local communities, manage natural resources and help accelerate the achievement of the SDGs in Indonesia. The approaches include conservation (carbon), ecotourism, and planting of nutmeg trees. The program will be implemented in 2021 in Batee Meucanang Village, Labuhan Haji Sub-district, South Aceh District.

Forest is an important place relied on by the locals for their livelihood through agricultural cultivation and various plants that ecologically contribute to the preservation of forest ecosystems and fully empower every plant commodity that has economic and market value. Since the pandemic and in the last few years, we realize that the forest ecosystem has been disrupted by various activities of some humans that damage the environment. One of them is

illegal logging. This has caused damage to the function of the forest ecosystem and several commodity crops of local community farmers have also begun to have a damaged impact. Like the nutmeg plant that began to die instantly and did not bear fruit like in the last 10 years, durian fruit that did not taste sweet or even tasteless when harvested and ripe, as well as many other damaging effects due to human activities that are not environmentally friendly and destructive. Seeing the complexity of this problem, Restu, as a young man with other conscious communities, was moved to create big changes to mitigate the damage to the forest ecosystem through the Jejak Rimba Raya community which was based on research data and continued to find the right solution which we would apply in the future. And all the donations that will be collected through this fundraising will be allocated to create impactful and sustainable changes in environmental sustainability, green growth, empowerment of local communities and based on sustainable development goals as well as environmentally friendly principles.

2. Building Disaster Risk Reduction for City and Community Resilience

By Yayasan Pusat Kajian dan Perlindungan Anak

Save The Children partners with Google.org to build community and children resilience in the face of natural disasters and the climate crisis. This program targets direct beneficiaries of 560,000 people, of which 30% are children who live in disaster-prone areas. The pilot project was carried out in West Java Province, specifically in West Bandung District, Bandung District, and Tasikmalaya District. The selection of pilot areas

Picture A.13
Planting Tree Activity

was based on the vulnerability of the region where 46% of the total national disaster incidents were reported to have occurred in the West Java Region. In addition, West Java is one of the most risk areas of flooding, landslides and extreme weather associated with the climate crisis.

This program implements three strategies which involve stakeholders at the national and subnational levels. At the national level, this program involves members of the steering committee of BNPB, the Ministry of Education and Culture, the Ministry of Villages and PDT, as well as the Coordinating Ministry for Human Development and Culture, while from non-government parties are U-Inspire, UN-Pulse Lab, BBC Media Action, and the Humanitarian Forum Indonesia where 16 religious-based organizations are incorporated. At the sub-national level, this program involves the provincial BPBD and BPBD of the three districts, the BMKG, the Geological Agency and groups of children and youth. Meanwhile, at the site level, this program partners with the West Java LPBI-NU, Village Facilitators, 10 village administrations and 10 schools in the intervention areas. The program employs the conceptual framework of Climate Smart Disaster Risk Management, Disaster Safe Education Unit, principles of child participation, and principles of digital development.

The program directly increased awareness and preparedness for 46,363 people (12% children and youth). This program indirectly reaches 20,541,842 (12% children and youth). This increased capacity and awareness was achieved through training and a series of digital campaigns. This program also launched the child-friendly application BUMI KITA which provides content on disaster risk reduction and climate change adaptation. It also facilitates 100 children from 6 provinces to voice their aspirations directly to the legislative and executive parties regarding the climate crisis against children and child development issues in their living areas. Through this program, young people receives capacity building related to climate change issues through the Jabar Tangguh Action forum. In addition, 10 communities and 10 schools carry out disaster risk reduction and climate change adaptation practices that are integrated with village development and empowerment systems. One of them is community-based and school-based climate and weather information, where residents and schools monitor rainfall to understand weather conditions in their area.

3. Utilization of Biogas for Household Energy Supply

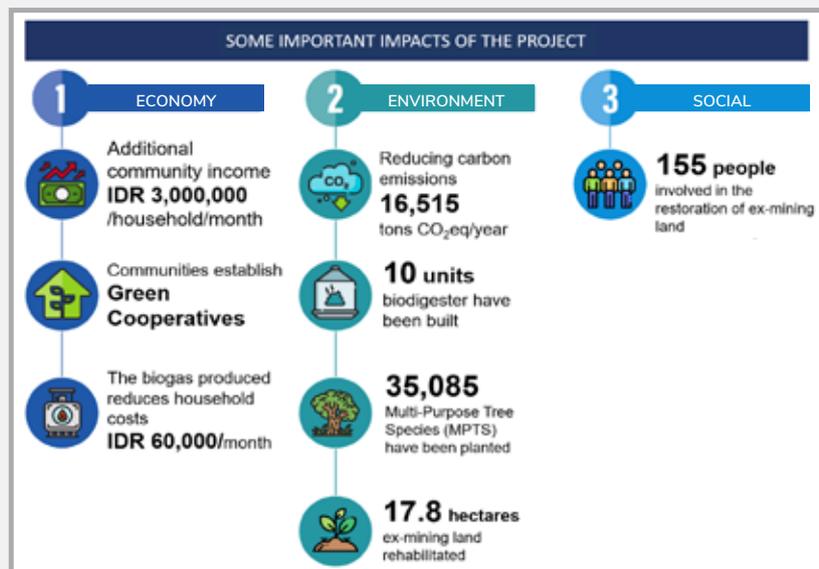

By Sesami

Picture A15
Biogas making process

The activity of utilizing biogas for household energy supply, in addition to supporting SDG 13 Climate Action, also supports SDG 1 No Poverty, SDG 7 Affordable and Clean Energy, and SDG 8 Decent Work and Economic Growth. There are about 30 ha of post-mining land and other moor locations in three villages, namely Keningar, Ngargomulyo, and Sumber Villages which are owned by local residents. After mining activities with heavy equipment were ceased (in 2014), it left the critical land barren. ICCTF collaborates with SESAMI (Sedya Samahita Memetri Indonesia), a local NGO, to develop activities at the site level to fulfill household energy by utilizing biogas. The aim of this project is to reduce GHG emissions and the intensity of GHG emissions from livestock waste by producing renewable energy (biogas), low-emission waste (bioslurry), and compost, which are good for soil and ecosystem quality, and increase carbon stock (from activities revegetation).

This activity was carried out in Keningar Village and Ngargomulyo Village, Magelang District, Central Java Province. Through this project, local people are trained to build a biodigester and operate a nursery center. This project also helps local communities to rehabilitate land formerly used as mining site and replant them with various kinds of trees.

Picture A16
Impact of the program

The challenges in implementing this activity are partly because the lands are usually owned by widows and elderly, which tends to be uncooperative. The loss of land boundaries at the activity location in the long term will have the potential to create conflicts between land owners in the use of land titles that

have been certified. In addition, the land on the site is barren sand that grows only grass and shrubs, and requires special techniques to support the success of the activity. Another challenge is the need to involve various parties to support the success of this program. This program has the opportunity to be replicated (scaled-up) by several Ministries/Agencies such as the Ministry of Environment and Forestry, Ministry of Village, Ministry of Energy and Mineral Resources and Ministry of Agriculture, as well as various parties outside the government in various locations in Indonesia.

4. Improving the Food and Economic Security of Vulnerable Communities through Sustainable Agriculture

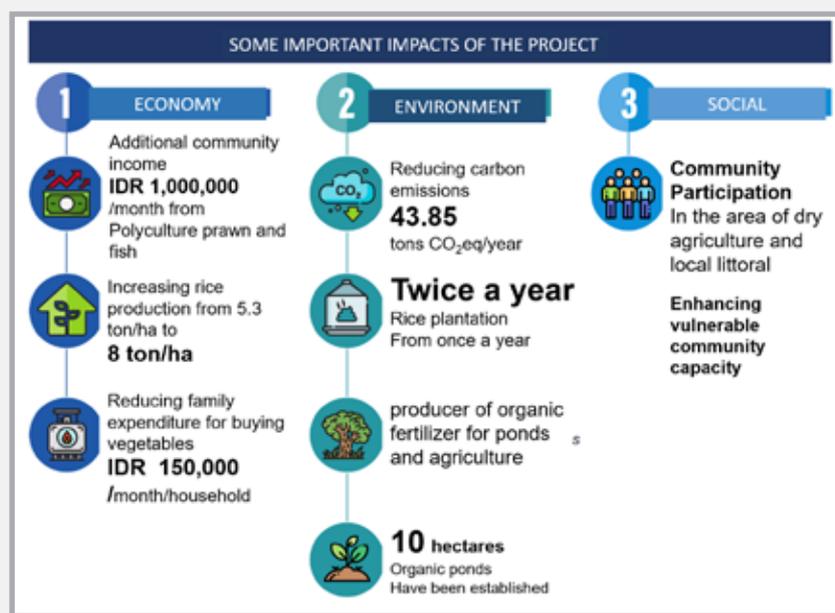

By FIELD Foundation

Activities to increase food security and the economy of vulnerable communities through sustainable agriculture, in addition to supporting SDG 13 Climate Action, also support SDG 8 Decent Work and Economic Growth, SDG 11 Sustainable Cities and Communities, and SDG 14 Life Below Water. There are 400 ha of shrimp ponds in Kanaungan village in Labakkang sub-district, Pangkep, South Sulawesi which always experience crop failure. The use of chemical fertilizers continues to increase, while the income of farmers is decreasing.

ICCTF in collaboration with the FIELD Foundation carries out several activities to increase sustainable food production and the economy for vulnerable communities. Tambak Field School has been established to stop the use of chemical fertilizers and replace them with organic fertilizers. The Agricultural Field School was also developed to increase the productivity of rice and horticulture. Mangrove planting in aquaculture areas has also been carried out. In addition, the community has also succeeded in applying rice farming and yard horticulture organically by making independent fertilizers. This project has generated additional income for the local community and reduced production costs.

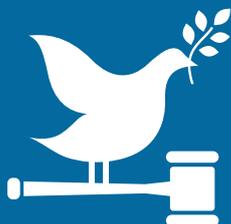

Picture A17
Documentation of FIELD Foundation activities

Picture A18
Impact of the program

The challenges in implementing this program include the location of activities in Pangkep District which is an area with relatively low agricultural productivity. In addition, a comprehensive understanding of farmers - which concerns: plant types and varieties, proper planting time, more water efficient cultivation techniques, and integrated pest management methods – has not been optimally mastered by farmers in order to adapt to climatic conditions. Another thing that becomes a challenge is the low level of community income and dependence on dry land with low productivity. These challenges were successfully overcome and resulted in various benefits. This program has the opportunity to be replicated (scaled-up) by several Ministries/Agencies such as the Ministry of Public Affairs, the Ministry of Village, the Ministry of Public Works and Housing, the Ministry of Home Affairs and the Ministry of Agriculture, as well as various parties outside the government in various locations in Indonesia.

GOAL 16

PEACE, JUSTICE AND STRONG INSTITUTIONS

LIST OF GOOD PRACTICES FOR GOAL 16

1. Collaboration for the Issuance of Birth Certificates for All

By UNICEF Indonesia

The Government of Makassar City and Gowa District have received support from UNICEF in the 2017-2019 period to increase the coverage of birth certificate ownership in their respective regions. UNICEF's role is to facilitate and support cross-sector collaboration between civil society organizations and local governments.

Based on administrative data derived from the Population Administration Information System (SIK), the program prioritizes seven sub-districts in Makassar City and eight sub-districts in Gowa District which have the lowest coverage of birth certificate ownership. The program is designed to bring services closer to children, whether children living in remote areas or children who are in unfavorable situations such as children in poor households, children living in slum areas, children with disabilities or children with parents with disabilities, children pursued by law, or children stigmatized because of a certain disease who live in a care institution.

The local government of Makassar City launched the Program in 2017 by making visits to schools or mobile services in strategic locations. Puskesmas, maternity clinics and hospitals are strategic locations to bring services closer to the

moment a birth occurs and to integrate health care centers for children aged 5 to 18 years.

Two teams of 100 staffs and volunteers were deployed to implement the program in Makassar City and the surrounding islands. The team was assigned to provide a one-stop service for a variety of services, such as information on population registration, verification of population documents, and printing of birth certificates. The team also collaborated with community organizations concerned with population registration, such as organizations that focus on issues of children and women, education, and social workers.

In 2018, the Department of Population and civil registration of Makassar City and Gowa District launched an online-based registration system to connect population and civil registration offices with hospitals and health centers. To implement it, more than 50 officers were trained as operators in charge of verifying supporting documents (such as KTP and KK). This service allows newborns to receive birth certificates immediately, and the family card will be updated before the mother and baby leave the hospital or childbirth clinic.

The impact of this program can be seen with a significant increase in ownership of birth certificates from 58.5% (2016) to 95% (2019) in Makassar City, and from 40.4% (2016) to 99.6% (2019) in Gowa District. The results of this program even exceeded the national target of 85%. In addition, the ease of obtaining a birth certificate further encourages mothers to give birth in health facilities accompanied by skilled health workers. This can contribute to a reduced risk of maternal and child mortality. Ownership of population documents also has an impact on increasing vulnerable groups' access to health and social protection programs funded by the government.

2. People Living with HIV in Indonesia are Free from Stigma and Discrimination Thanks to a Supportive Response and Environment

By UNAIDS

The Indonesian government is committed to implementing a strategy to accelerate the achievement of HIV prevention known as the Fast Track Commitment as an effort to achieve the target to stop the AIDS epidemic in Indonesia by 2030.

Through this Fast Track Commitment, the Government of Indonesia sets a target that as many as 90% of people with HIV can find out their status, 90% of people who already know their HIV status can access treatment, and 90% of people with HIV who have accessed treatment can experience a decrease in the amount of virus in their blood (viral suppression).

Achieving these targets requires several things, one of which is the provision of a supportive environment in which people living with HIV and key population groups who are vulnerable to HIV are free from stigma and discrimination in various areas of their lives, including in the fields of health, education, employment, as well as justice.

In its efforts to support the Indonesian government in achieving these targets, UNAIDS is implementing a program to create an enabling environment and the elimination of laws/policies that hinder the HIV response in Indonesia

through cooperation with relevant ministries and state agencies such as the Ministry of Health, the Coordinating Ministry for PMK, BAPPENAS, Komnas HAM, Komnas Perempuan, and also civil society groups.

UNAIDS implements this program by producing policy studies and advocacy, campaigns and information dissemination, to assisting in the preparation of a National action plan related to the creation of a supportive environment for the HIV response.

One of the achievements made by this program is the inclusion of women and children living with HIV as one of the priority groups of beneficiaries in the 2020-2024 National Human Rights Action Plan. In addition, along with Komnas HAM, Komnas Perempuan, and civil society groups UNAIDS also provided input related to human rights-friendly policies in the HIV sector, especially in the discussion process of the RKUHP, the Bill on the Elimination of Sexual Violence, and the Bill on Family Resilience. In its implementation, UNAIDS faces challenges in multisectoral coordination, especially after the disbandment of the AIDS Commission in 2017. However, as a lesson, UNAIDS is currently encouraging multi-sectoral coordination across ministries by involving civil society groups.

3. Progressive and Leading Young Women

By Plan International Indonesia

Based on the 2010-2035 Indonesian Population Projection data from Statistics Indonesia, there are around 45 million women population aged 0-19 years in 2020. With this large number, young women have great potential to encourage development in Indonesia. However, these efforts require women empowerment and encouragement for gender equality. Seeing this potential, Plan International Indonesia, in collaboration with the Ministry of Finance of the Republic of Indonesia (Kemenkeu), initiated the Girls Leadership Program as a forum for teenagers and young women aged 15-24 years to channel their aspirations towards their vision of equality and development, to be able to empower their community.

The Girls Leadership Class, which started at the end of 2020, successfully selected as many as 120 participants who were referred to as "Girls Leaders". The Minister of Finance has the role of principal mentor, capacitating selected participants with materials related to access to education and the use of technology. Capacity building for the selected participants was continued with mentoring activities by inspiring young mentors and experts, followed by a selection of action plan proposals up to the implementation stage covering 31 regions, and then closed with inter-generational dialogue.

The intergenerational dialogue is a forum to invite stakeholders to support the leadership of children and young women and involve them in the development process. The Girls Leadership Class also managed to reach 2,620 other people through their Youtube channel.

In February 2021, 31 Girls Leaders, three of whom represented groups with disabilities, implemented their action plans with their communities. As a result, the Girls Leaders successfully carried out 95 activities in 25 cities/districts in Indonesia. With a diverse focus on issues, including the issue of education and technology, this activity succeeded in reaching 3,361 direct beneficiaries. In addition, several communities led by participants also received support, such as the Be With You Community, which received financial support from one of the investors to develop the concept of empowering women in business. The Panti Carita Community has also succeeded in getting support from the Communication and Information Office of Jepara District in a project to educate children in an orphanage.

This activity is expected to support the increase in the participation of young women in the policy-making process from the community level to higher levels.

4. Creating a Safe and Child Friendly School: Anti-Bullying Program in Schools

By Setara Foundation, Indonesia Melayani Foundation (YIM), and the Provincial Governments of South Sulawesi and Central Java, supported by UNICEF Indonesia

National data from the 2015 Global School Health Survey (GSHS) shows that 21% of children aged 13-15 have experienced bullying in the past month.

UNICEF together with government, universities, youth, and community-based organizations designed an intervention model to prevent bullying in junior high schools (SMP) in Indonesia. Based on the workshops and by adapting the Roots model from America, the intervention program seeks to build a positive school climate through student-led activities. This approach is documented in a comprehensive module entitled 'Roots as a Bullying Prevention Program for Junior High Schools (SMP)' which was developed with UNICEF, Setara Foundation, Indonesia Mengabdi Foundation (YIM), and the provincial governments of South Sulawesi and Central Java.

In the Roots program, students are encouraged to "propose" their peers to become agents of change based on social networking theory. The change agents that have been formed will be included in 15 Roots module training sessions designed for junior high school students aged 12-15 years. Through training, trained Roots Agents can understand and identify various forms of bullying and develop and implement coping strategies. In addition, teachers also have a role to play in capacity building through positive discipline and prevention of bullying.

In 2017, Roots has been implemented in two junior high schools in Makassar and two junior high schools in Gowa. As an implementing partner, YIM held training for 10 facilitators from staff and members of the Children's Forum. This pilot program managed to reach 3,568 students. The results of the evaluation of the program show that bullying has decreased by 29% and victimization has also decreased by 20%. Teachers and facilitators also noted important advances in the positive behavior of students, including those selected to be agents of change.

Seeing the success of the previous pilot program, the Office of Women's Empowerment and Child Protection of South Sulawesi Province in 2019 began to replicate the Roots program in several locations such as Makassar City, Maros, Gowa, East Luwu, and Bulukumba. Twenty facilitators have been given training to implement Roots in one school in each district/city. In addition, the Makassar City Education Office also provided financial support for teacher training in five schools and the application of Roots in two schools. Then, in 2020, UNICEF and its implementing partner, YIM, received funding from the Ministry of Education and Culture (Kemendikbud) to replicate Roots in 50 schools in South Sulawesi and Central Java.

After implementing the program several times, several adjustments took place, including the delivery of a "character-based education concept and value" module for students in Islamic schools. In addition, in response to the ongoing pandemic, YIM produced a video tutorial on "Roots in a New Normal Life" to help teachers deliver online bullying prevention guidelines.

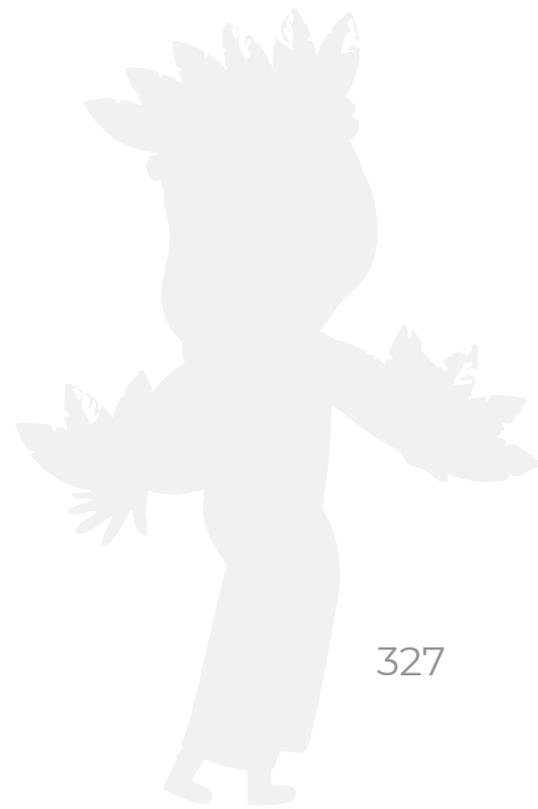

Some of the lessons learned from the Roots program include that the involvement of teachers as facilitators can help the sustainability of the bullying prevention program, increasing teacher expertise in positive discipline can encourage more effective responses to complaints of bullying, it is important to link the Roots program with the value of character-based education promoted by the Ministry of Education and Culture and to increase the involvement of school management to the development of child-friendly regulations. There is potential for implementing the Roots program online but there needs to be an assessment first in the context of a pandemic.

5. Mitigating the Impact of a Pandemic on Prisoners and Detainees for Children and Adults

By Minister of Law and Human Rights of Republic of Indonesia

Prison and detention facilities in Indonesia are closed institutions that have high occupancy rates and even tend to exceed capacity. This situation makes it prone to the spread and transmission of COVID-19. Therefore, after President Joko Widodo designated COVID-19 as a non-natural national disaster, the Ministry of Law and Human Rights of the Republic of Indonesia issued a Decree of the Minister of Law and Human Rights of the Republic of Indonesia Number M.HH-19.PK.01.04.04 of 2020 concerning Expenditure and Release of Prisoners and Children through Assimilation and Integration in the Context of Prevention and Control of the Spread of COVID-19. This Ministerial Decree is the government's response to preventing the spread and handling of COVID-19 in incarceration and detention facilities such as Correctional Facilities (Lapas), Child-Specific Correctional Facilities (LPKA), and State Detention Centers (Rutan).

The release of prisoners through assimilation and integration in the form of parole and pre-release parole, were granted to adult prisoners who have served 2/3 of their sentence on 31 December 2020. For children, release through integration and assimilation can be granted if he/she has served half of his/her sentence on 31 December 2020. Assimilation activities are carried out at the house of each prisoner with guidance and supervision carried out by the Correctional Center and reports by officers submitted online. As of June 2020, Indonesia has released 992 children of prisoners and convicts, about half of the number of children in detention and imprisonment facilities in June 2020 (UNICEF, 2020). During 2020, there are at least 57,000 prisoners who have received assimilation (Dirjen Pemasyarakatan KemenkumHAM, 2021).

GOAL 17

PARTNERSHIPS FOR THE GOALS

LIST OF GOOD PRACTICES FOR GOAL 17

1. Optimizing Local Resources

By Penabulu Foundation

Penabulu Foundation initiates domestic resource raising in a fairly wide range of activities. This ranges from knowledge transfer, advocacy, support for policy formulation to funding. The foundation explores various forms of local power, promotes it, and links it with other local forces, including local government. This link is manifested in a “Lokadaya”, which is a digital — crowdsourcing — platform to raise public resources, distribute, and convert them in a variety of innovative activities in the field. This initiative has started since October 2020 when 57 local CSOs committed to developing the “Lokadaya” platform by first identifying and sharpening all the needs for developing community activities. This activity is planned to be held until September 2022.

Lokadaya contains three main features, namely “Power Raising”, “Partner Profile”, and “Change Story”. The “Power Raising” feature is an arena for raising resources in the form of public donations, non-fund donations (volunteering, equipment, tools or other asset support), as well as partnerships or collaborations. The “Partner Profile” feature is a medium for linking CSO local service initiatives to the targeted public/target audience. Meanwhile, “Change Story” is a

directory of ongoing initiatives.

So far, “Lokadaya” has been able to involve 200 civil society organizations (CSOs) in 34 provinces, which carry out innovative activities with the community. “Lokadaya” is a bridge connecting development actors — government, society and the private sector — and capitalizes all forms of power. The various activities that have been carried out can be divided into three classes, namely physical development, economic development, and social services development.

Physical development takes the form of improving village street lighting, building city parks and managing residents’ waste, recycling used cooking oil into soap and diesel fuel for mosque, making nests for owl that preys on ricefield rat, and harvesting rainwater in coastal villages. The development of social services includes the provision of children’s libraries, services to refer and assist TB patients during their treatment, village legal assistance, patrol and coordination of land fire mitigation, as well as campaigns and advocacy for government regulations/policies with residents. Among other things, economic activities include assisting women cotton farmer economic institutions in the production process.

This initiative has the potential to be replicated, reproduced and developed in various places. This expansion will reach more stakeholders with innovative ideas, including distributing more resources. Above all, local power is its main characteristic, so that the link that is formed is actually an aggregation of all forms of local specialties and initiatives.

2. Sambirata, Empowered Spice Village

By PT Industri Jamu and Farmasi Sido Muncul Tbk.

The Sambirata Spice Village Program was initiated in 2019 and lasts until March 2021 with the concept of CSV (Creating Shared Value). Sambirata village, a 'least developed village' in Banyumas, Central Java, was chosen because of its great potential for cardamom development. This program was developed together with the local farmer group "Kridoyuono", the Sambirata Village Government, and the Banyumas District Agriculture Office. The Kridoyuono Farmer Group itself has 270 members, consisting of 240 old farmers and 30 young farmers under 30 years of age. Some of these young farmers are those who returned home due to the COVID-19 pandemic. This program was carried out in the form of cooperation in the development and utilization of cardamom (*Amomum Cardamomum L.*) which is one of the raw materials needed for herbal medicine production at PT Sido Muncul.

PT Sido Muncul provides farmers with a variety of support, such as superior seeds, fertilizers, equipment, counseling, and technical assistance, from the planting, maintenance and harvesting stage, to post-harvest processing into raw materials that adhere to factory standards. This cooperation includes guidance for making organic fertilizers for the purpose of improving the village environment and reducing dependence on chemical fertilizers.

PT Sido Muncul purchased all the crops that have been processed into simplicia at market prices or prices that are fair and beneficial to both parties. However, this program is not without its share of problems. While cardamom can be produced well, it cannot be dried optimally. As a result, the produced cardamom was often rotten

and caused losses to farmers. Farmers need a drying machine and energy to drive it. Currently, the drying machine has been successfully made by utilizing energy from the Micro Hydro Power Plant (PLTMH). This micro-hydro-power guarantees the availability of electricity supply for cardamom business activities.

Further programs were developed to intensify productivity, both at the site level and at the business management level. Various trainings and business management developments continue to be carried out. At the site level, the intensification of cardamom cultivation is being developed. Unproductive land — even home yards — is used for cultivating cardamom and even other spices. At the same time, digital marketing is now being driven as part of business management development. Through this approach, cardamom has increased the capacity of Sambirata farmers, both as farmers and as business actors.

This is a long-term program. Replication has been carried out in several other neighboring districts. In fact, the development is also carried out for other types of spice plants, because PT Sido Muncul requires more than 160 types of raw materials from medicinal plants. That way, expansion occurs in terms of area and in terms of types of plants.

3. “Temali” – Bringing Together and Uniting Volunteers

By Indorelawan – Jakarta

Temali Program (“Meet and Greet”) is a collaborative program between Indorelawan and the Indika Foundation between August and December 2020. Indorelawan is an online-based non-profit organization that brought together social organizations that need volunteers with anyone who wants to volunteer. Meanwhile, Indika Foundation is a foundation established by PT Indika Energy that promotes integrity, achievement, unity in diversity, cooperation and social responsibility.

The Temali program focuses on capacity building for organizational leaders and volunteers in character education in times of crisis. This program targets young people in the age range of 17-25 years. In particular, this education is directed at developing empathy and critical thinking through a series of campaigns and classes divided into four groups, namely “Temali Class”, “Temali Camp”, “Temali Handbook”, and “Temali Campaign”.

“Temali Class” is an online class for representatives of social organizations, who want to learn about empathy, critical thinking and other materials about character and capacity development, such as leadership, social programs, communication strategies and others. Similar classes are also directed at individual volunteers, with the name “Temali Camp”, with an emphasis on applying empathy and critical thinking in daily life practices by involving people with different backgrounds and

thoughts. “Temali Handbook” is a character and capacity building module for social organizations and volunteers that can be accessed and downloaded for independent learning. Meanwhile, “Temali Campaign” is online content in the form of animated videos, posters, and comics as a medium for studying empathy and critical thinking.

As the program develops, Temali modules have been expanded to cover themes of self-leadership, designing impactful social programs, increasing organizational scale, volunteer management, monitoring and evaluation of programs, as well as developing storytelling skills for social organizations.

Above the principles of empathy and critical thinking, Indorelawan itself takes on the role of a volunteer hub that brings young people to care more about social, economic and environmental issues. Online interactions and rubrics are hosted on the <https://www.indorelawan.org/> site. Various activities and enabling organizations are recorded on this site, to make Indorelawan a node of concern and learning for the stakeholders involved in it.

So far, no less than 577 young volunteers are involved in various Indorelawan activities. At the same time, Indorelawan has raised resources from 196,548 people and 3,330 organizations to provide the driving energy for 5,016 activities.

LIST OF PARTIES INVOLVED IN THE PREPARATION OF VNR INDONESIA 2021

5. LIST OF PARTIES INVOLVED IN THE PREPARATION OF VNR INDONESIA 2021

(1) Preparatory Meeting for the Preparation of VNR Indonesia 2021, Date: 3 February 2021

Led by: Deputy of Maritime and Natural Resources Affair as the Chairman of the National SDGs Implementation Team

Attended by:

- Ministry of National Development Planning/ Bappenas
- Statistics Indonesia
- National SDGs Secretariat

(2) Initial Discussion Meeting on the Preparation of VNR Indonesia 2021 with Non-State Actors, Date: 9 February 2021

Led by: Head of the National SDGs Secretariat

Attended by:

- Ministry of National Development Planning/ Bappenas
- Indonesia Business Council for Sustainable Development
- Muhammadiyah Central Executive
- SDGs Center of Padjadjaran University
- SDGs Hub of University of Indonesia
- SDGs Center of University of Jember
- SDGs Center of Riau University
- Palangka Raya University
- The SMERU Research Institute
- Ministry of Foreign Affairs
- Indonesia Global Compact Network
- PT. Pertamina

(5) Preliminary Meeting with UN Agencies,**Date: 24 February 2021**

Led by: Coordinator of the National SDGs Secretariat Expert Team

Attended by:

- Ministry of National Development Planning/ Bappenas
- UN Agencies
- National SDGs Secretariat

(6) Preparation of VNR 2021 Goal 12 and 13,**Date: 26 February 2021**

Led by: Chairperson of the Sub-Working Group for SDGs Goal 12 and 13

Attended by:

- Ministry of National Development Planning/ Bappenas
- Deutsche Gesellschaft fur Internationale Zusammenarbeit (GIZ) GmbH
- Asian Development Bank
- The Japan International Cooperation Agency (JICA)
- National SDGs Secretariat

(7) Meeting of the Environmental Development Pillar Working Group for VNR 2021**Date: 16 March 2021**

Led by: Chairperson of the Environmental Pillar Working Group

Attended by:

- Ministry of National Development Planning/ Bappenas
- Lab SESO (Social-Ecological Systems of the Oceans) of IPB University and the Indonesian Coral, Shell and Ornamental Fish Association (AKKII)
- Ruang Waktu Knowledge Hub for SUD
- Ruang Waktu-Knowledge Hub
- JICA SDGs Project Team
- National SDGs Secretariat

(8) Coordination Meeting for the Preparation of VNR 2021 Goal 8 with the Government,

Date: 19 March 2021

Led by: Chairperson of the Sub-Working Group for SDGs Goal 8

Attended by:

- Ministry of National Development Planning/ Bappenas
- Statistics Indonesia
- Partnership for Action Against Child Labor in Agriculture Indonesia/JARAK
- Ministry of Cooperatives and Small and Medium Enterprises
- Financial Services Authority
- National SDGs Secretariat
- Ministry of Women Empowerment and Child Protection
- Agency Coordinating Investment Capital

(9) Coordination Meeting for the Preparation of VNR 2021 Goal 8 with Non-Government,

Date: 22 March 2021

Led by: Chairperson of the Sub-Working Group for SDGs Goal 8

Attended by:

- Ministry of National Development Planning/ Bappenas
- SDGs Center of Gorontalo State University
- The SMERU Research Institute
- Indonesia Business Links
